Put It to Work: Prepare for Cybersecurity Jobs

Module 1
PIVOT 2021 AND CHANNGING ROBOIS

Get started with the course
- Introduction to Course 5 — Video · 1 min
- Course 5 overview — Reading · 10 min
- How to interact with your peers — Reading · 10 min
- Module 1 glossary and FAQs — Reading · 10 min

Assets and cyber defenders
- Welcome to module 1 — Video · 1 min
- Analyze event logs with Python with Professional Engineer — Graded · 100%
- Security as a career — Reading · 10 min
- Skills and asset classification — Reading · 10 min
- Explore assets and risks — Graded · 30 min
- Test your knowledge: Asset protection and risk — Practice Assignment · 4 Grade · 100%

Your future in data protection
- Assets and protect without regret — Video · 4 min
- Protect privacy and business continuity — Reading · 10 min
- Explore privacy frameworks — Reading · 10 min
- Test your knowledge: Your future in data protection — Practice Assignment · 4 Grade · 100%

My own Private Idaho and communication incidents
- Module 1 Quiz — Graded Quiz · 70%
- Security Technician Indeed — Reading · 10 min
- Module 1 Challenge — Graded Assignment · 4 Grade · 100%

Module 2
SCUBBERDOOD

Incidents in cybersecurity
- Welcome to module 2 — Video · 1 min
- Responsibilities of escalation — Reading · 10 min
- Attack with Locksmith — Reading · 10 min

To escalate or not to escalate
- Prepare to escalate through security frameworks — Video · 4 min
- Navigate roles and responsibilities during escalation — Reading · 10 min
- Identify, Perform cybersecurity incidents and containment — Practice Assignment · 4 min
- Test your knowledge: To escalate or not to escalate — Practice Assignment · 4 Grade · 100%

Trying is everything
- How simple activity to major data breach — Video · 3 min
- What will find to escalate a security incident? — Video · 3 min
- Module 2 Glossary — Reading · 10 min
- Juliana's story: Attention to detail — Reading · 10 min
- Test your knowledge: Trying is everything — Practice Assignment · 4 min

Review: Counter Incidents
- Wrap up — Video · 1 min
- Glossary terms from module 2 — Reading · 10 min
- Module 2 Challenge — Graded Assignment · 4 Hr 0 m

Module 3
Communicate effectively to influence stakeholders

Module 4
Engage with the cybersecurity community

Module 5
Location optimization and Bloom

Juliana's story: Attention to detail

0:00 / 3:09

This is the second reading in the scenario about Juliana Soto, a cybersecurity analyst who was recently hired by Bright Star Time Payment Solutions (a [fictitious company](#) used for this course). In, Juliana identified important anomalies in the company's network traffic and prevented a data breach. Now, Juliana is working on a new project to help improve the company's incident alert policy and her attention to detail. Follow Juliana as she encounters elements of this job.

Focus on the details

As she prepares to go into the office this morning, Juliana reflects on the previous day's accomplishments.

- Read through company information to learn about the most important assets she is tasked with protecting
- Learned that her company deals with PII/data from customers
- Put together an information security (file) to be ready for the organization's data
- Began monitoring security systems on her work laptop

It was an exciting first day full of new information for Juliana! She wonders what today will bring.

Juliana is at her desk reviewing her logs and requesting 3 records. Suddenly, two system alerts her of suspicious log activity. It appears that one employee's account has been locked due to 10 failed login attempts. She finds this unusual because the incident policy states that all flaggings attempts should be accompanied by the password protection team.

Juliana is excited about the first chance to escalate a security event. As she prepares to go through the escalation process, she reviews the company's incident policy. She knows that the policy is a living document that is updated when new risks are discovered. As a new hire, Juliana is aware that she can learn from experienced members of the company's cybersecurity team. She views this as a major concern. She recalls the importance of assessing the severity of information from her previous security training. She learned the previous day that her company stores a large amount of sensitive customer data. Hundreds of customers will be impacted if a system storing this kind of information leaks a vulnerability.

Juliana decides that the unknown source attempting to compromise the system that stores the bank information of customers is the more urgent of the two events and needs to be handled immediately. She references the company's escalation policy to find the best way to handle the escalation process for the type of incident.

Juliana carefully follows the process outlined in the escalation policy, making sure to be attentive to a lot of the details. She knows that [documenting](#) the incident is important for [communicating](#) with stakeholders later. She completes all the steps outlined in the escalation policy for an event dealing with a malware PII.

Next, she decides to escalate the lower priority event. Once again, she follows the company guidelines to escalate the event.

Juliana's supervisor is impressed with her initiative and ability to follow the escalation guidelines. Juliana is off to a great start in her security career!

Key takeaways

Attention to detail is important for an entry-level security analyst. It helps the analyst monitor data logs and escalate incidents to the appropriate team. Juliana's ability to follow the company's incident escalation policy is vital to an organization. This helps the analyst prioritize how quickly certain incidents should be escalated.
