- Discover how Gemini can help me create stories with real-time feedback
 Reading • 10 min

MODULE 5
Review: Maximize productivity with AI Tools

Use Gemini in Google Docs, Slides, Sheets, Meet, and Gmail

0:00 / 4:00

Discover how to leverage AI tools to stay up-to-date with emerging technology and boost your productivity. In this reading, you'll learn about Gemini in Workspace apps, including Gmail, Google Docs, Slides, Sheets, and Meet. You'll also explore how to access Gemini in Workspace apps and Workspace apps in Labs via web, Chrome Dev, Android, or Google, and familiar commercial offers.

Introduction to Gemini in Workspace apps

You can use Gemini in Gmail, Google Docs, Slides, Sheets, and Meet. It's available as an add-on for purchase for Google Workspace Business Starter, Standard, Plus, Enterprise, and Frontline, and all Workspace Individual subscribers. You can access Gemini in Gmail from both desktop computers and mobile devices.

Note: Even if you're not currently using an eligible Google Workspace account, you may be able to access Gemini in Workspace apps or the web (Labs), Gemini in Workspace apps is not yet available in certain countries and languages. For more details, refer to the documentation at Gemini Faq - Gemini for Google Cloud.

Also, the Gem Marketplace, an archive, you can access information about Gemini in Workspace apps, including visual examples of the functionality and information about purchasing eligibility.

Google Docs

Google Docs is a collaborative application for creating most types of documents. You can use Gemini in Docs to perform a variety of tasks related to writing and refining documents, such as to:

- Write text for your document
- Summarize the content of your document
- Brainstorm new ideas to include in your document
- Suggest stylistic changes to existing text
- Proofread for grammar and spelling

For example, a real estate agent might use Gemini in Docs to help write a marketing post about a nearby town with homes for sale. They can prompt Gemini in Docs for suggestions. If Gmail, have trouble getting started, or to overcome writer's block. Gemini in Docs can help the business owner review and customize the output, then provide a refined prompt to produce the post.

Gmail

Gmail is an application for sending and receiving emails. Similar to tasks in Docs, Gemini in Gmail can help you with writing those emails. You can prompt it to:

- Draft emails
- Edit and fine-tune existing, finished writing, or rebranding succeeding brief

For example, an event manager wants to send a department sales invitation email for the quarterly review meeting. They can use Gemini in Gmail to help compose the email. They can prompt Gemini in Gmail to write an email as an invitation to the quarterly review business meeting. Then the manager can insert the suggested text into the body of the email. The manager can also use the **Formalize** option to make the tone of the email more formal. Gemini in Gmail can also help edit, and refine the text to better meet their needs, as well as fill in details like the date and location of the meeting.

Google Slides

Google Slides is a collaborative application for creating slide-based presentations. When working with Gemini in Slides, you can:

- Generate unique images to convey your ideas visually
- Apply specific visual styles to generated images

The owner of a small coffee shop, for example, might use Gemini in Slides to create a marketing campaign for their upcoming launch of a holiday coffee blend. The business owner can request a specific style for their images, such as a photograph with a solid background, a sketch, a watercolor painting, and more. There, the business owners can also request the prompt combining generate an image in style terms, we'll focus in their upcoming timeline of campaign.

Google Sheets

Google Sheets is a collaborative application that lets you organize and analyze data in spreadsheets. Gemini in Sheets can help you to:

- Build models for a project
- Analyze data and get insights
- Generate visualizations, like charts or graphs

For instance, a product manager might use Gemini in Sheets to help them evaluate sentiment of feedback about a product. They could ask Gemini in Sheets to analyze survey data, offer recommendations, or create a visualization.

Google Meet

Google Meet is a video conferencing application for face-to-face virtual meetings. You can use Gemini in Meet to:

- Generate custom translations and from certain languages during meetings
- Create a unique background images
- Take notes for you

For example, consider a salesperson who needs to take notes during a meeting with a client so they can share the notes with their team members. The salesperson doesn't want to be distracted from the meeting, so they decide to use Gemini to take notes, allowing them to stay focused on their business with the client while creating a thorough record to share afterward.
