Module 1
Introductions 44m

Module 2
Build Apps with RAG

Provide an interactive RAG application with a front-end and back-end

Reading: Review of Concepts
10m • Done

Reading: Introductions Guide
Last Week's Topic • 2 m

Lab: Introduction to Gradio Interfaces for Image Models
In Queue | Est. 5m • 10 m

Lab: Introduction to Amazon Bedrock Agents for Financial Assistant
In Queue | Est. 5m • 10 m

Practice Quiz: Building Apps with RAG
Graded Assignment • 4 min

Summary and Highlights: Building Apps with RAG
Reading • 5 min

Final Exam: Building Apps with RAG
Graded Assignment • 2 min

Module 3
Build RAG Apps with Llamaindex

Summary and Highlights: Building Apps with RAG

0:00 / 0:00

Congratulations! You have completed this lesson. At this point in the course, you know that:

- Gradio is an open-source Python library for creating customizable web-based user interfaces, particularly for machine learning models and data processing.
- Gradio allows you to create interfaces for any User Having models with just a few lines of code. It supports various inputs and outputs, such as text, images, files, and more.
- Gradio interfaces can be shared with others through unique URLs, facilitating easy collaboration and feedback sessions.
- Gradio app's main interface comprises four major setting: Python code, creating an Interface, launching the web server, and accessing the web interface.
- The key features of Gradio include gr.Interface for input/output, gr.Number for numeric inputs, and gr.File for file uploads, enabling multiple file selections.
- Once deployed, users can interact with the interface in real-time via a web link.
