Summary and Highlights: Build a Comprehensive RAG Application

0:00 / 3:55

Congratulations! You have completed this lesson. At this point in the course, you know:

- FAISS and Chroma DB are built for different goals
- FAISS gives you minimum indexing, but limits metadata and distributed by default
- Chroma DB is easier to deploy and supports metadata, but has fewer indexing options
- You can build RAG retrievers with LangChain and Scikit-learn
- You completed RAG labs with LangChain's ContextualCompressionRetriever and Scikit-learn's TFIDFRetriever
- You should choose the right tool based on your project's size, complexity, and infrastructure
