Test your knowledge: Secure networks against Denial of Service (DoS) attacks

Practice Assignment • 10 min

Due Apr 21, 11:59 PM IST

Your grade: 93.75%

Your latest: **93.75%** • Your highest: **93.75%** • To pass you need at least 75%. We keep your highest score.

Next item →

1. What type of attack uses multiple devices or servers in different locations to flood the target network with unwanted traffic? — 1 / 1 point

- ( ) Phishing attack
- ( ) Denial of Service (DoS) attack
- (•) Distributed Denial of Service (DDoS) attack
- ( ) Tailgating attack

Correct
A DDoS attack uses multiple devices or servers in different locations to flood the target network with unwanted traffic.

2. What type of attack poses as a TCP connection and floods a server with packets simulating the first step of the TCP handshake? — 1 / 1 point

- ( ) ICMP flood
- ( ) On-path attack
- ( ) SYN-ACK flood attack
- (•) SYN flood attack

Correct
A SYN flood attack poses as a TCP connection and floods a server with packets simulating the first step of the TCP handshake. This overwhelms the server, making it unable to function.

3. Fill in the blank: The Denial of Service (DoS) attack _____ is caused when a hacker sends a system an ICMP packet that is bigger than 64KB. — 1 / 1 point

- ( ) On-path
- ( ) ICMP flood
- (•) Ping of Death
- ( ) SYN flood

Correct
The DoS attack Ping of Death is caused when a hacker sends a system an ICMP packet that is bigger than 64KB.

4. Which types of attacks take advantage of communication protocols by sending an overwhelming number of requests to a server? Select all that apply. — 0.8 / 1 point

- [x] TCP connection attack

This should not be selected
ICMP flood and SYN flood attacks take advantage of communication protocols by sending an overwhelming number of requests to a server. A SYN flood attack simulates a TCP connection and floods a server with SYN packets.

- [ ] Tailgating attack
- [x] ICMP flood attack

Correct
ICMP flood and SYN flood attacks take advantage of communication protocols by sending an overwhelming number of requests to a server.

- [x] SYN flood attack

Correct
ICMP flood and SYN flood attacks take advantage of communication protocols by sending an overwhelming number of requests to a server.
