1. Register 3-Design, K-Shell and sign in with your Google account.
2. For the KFS facilities, click on **My KFS**.
3. Follow the instructions to **Create My KFS** in new project.
4. Copy your new key and past it in our facilities in our database, the support manager. Also, adding photo for it.
 - **Important security note:** Treat your My KFS like a password. Never share it publicly or post it where others might catch.
5. Take note of the unique name as well.

- **Goal:** Create a high quality long-form generating text prompt.
- **Task:** *Write a story about a new character.* Write prompt that generates a long-form story (fiction, sci-fi, fantasy, and horror). *Write a story about a character who is missing a limb.* Write prompt.
- **Example prompt:** *Write a story about a character who is missing a limb.* Write prompt that generates a long-form story (fiction, sci-fi, fantasy, and horror). *Write a story about a character who is missing a limb.* Write prompt.
- **Is your explanation log:** Document the factors you used to generate quality (creativity, coherence, length), a possible application (what is the application), speed (writing the story), and any (creativity, coherence, length, speed).

c. *Equity investments in subsidiaries*

- **Task 10:** In *Task 9*, create a new image prompt. Write a prompt that describes a self-built car with self-driving and sensors, including the car's sensors, perspective, and style.
- **Example prompt:** Create a high-resolution landscape image of a modern city at sunset in a cyberpunk style, with neon lights and flying cars, in a wide-angle, full-on perspective, and include a horizon line. Create a computer-generated, futuristic cityscape, 3D perspective.
- **For your evaluation:** Document the image prompt, the image quality (HQ), and the image content, composition, a prompt application (text, image, video), and an evaluation (text, image, video), including a final evaluation.

c. *Redundancy is not operative with strong structure.*

- **Example:** *Write a story about a character who is struggling with a difficult decision.*
- **Example:** *Write a story about a character who is struggling with a difficult decision.*

- 1 You're generating a jungle scene that includes many animals, and you want the result to look coherent and not random. What is the best way to improve the prompt? (Select the best answer.)
 - A) Use a short prompt instead of a long prompt.
 - B) Specify the animals, their position, the ground, the ground's background, lighting, and style.
 - C) Describe the jungle environment and model using animals.
 - D) Keep the prompt short and sparse to the model to reduce overfitting.

4. Answer completely. Sub 1 and expert responses in Q1-Discussion should show: (a) Which the model produces and provides, (b) potential for future improvement, (c) the model's limitations. According to your Expertise/Experience, how should you be concerned or not concerned? (b) or (c) are the two answers.
- ☐ Based on the "Model's limitations"
 - ☐ Based on a "Potential for future improvement"
 - ☐ Based on the potential for future improvement
 - ☐ Based on a "Limitation assessment"
- ☒ **Not sure**
- Correct. Observations for the two Q1-Discussion, on questions on potential limitations of the model's output that should be taken into account.

8. Your manager asks which tool will be best for creating a chart. You suggest a presentation about software options (Table 6). Based on your analysis, recommendations, and feedback, should you recommend? Select the best answer:
- ☐ that prompt
 - ☐ design prompt
 - ☐ AI Equities
 - ☐ ideas prompt
 - ☒ None work

A. Back to Back: use your discussion.

- It is critical to prepare your "report" for your manager. Review your completed registration log and answer the following questions in the "Reflection" section of your log documents. This helps you think critically about what you have learned.
