Practice Quiz: Chroma DB Database Operations
Practice Assignment • 10 min

Due Aug 22, 11:59 PM IST

Your grade: 100%

Your latest: **100%** • Your highest: **100%** • To pass you need at least 60%. We keep your highest score.

Next item →

1. **Which of the following is NOT a valid distance metric in Chroma DB's HNSW configuration?** 1 / 1 point

   ● euclidean_squared
   ○ ip
   ○ l2
   ○ cosine

   ✓ Nice work

   The valid term is l2, not euclidean_squared.

2. **What is a key advantage of using vector databases like Chroma DB in recommendation systems?** 1 / 1 point

   ○ They eliminate the need for machine learning models.
   ○ They convert vector data into human-readable formats.
   ● They can handle large-scale vector data efficiently.
   ○ They automatically generate recommendations without any input.

   ✓ Nice work

   Vector databases like Chroma DB are designed to efficiently handle large-scale vector data, which is crucial for recommendation systems.

3. **How does Chroma DB facilitate similarity search within vector databases?** 1 / 1 point

   ○ By using machine learning models to predict vector similarities.
   ● By indexing vectors and providing efficient querying mechanisms.
   ○ By storing vectors as JSON documents for faster access.
   ○ By converting vectors into relational database tables.

   ✓ Nice work

   Chroma DB indexes vectors, which allows for efficient querying, a key component of similarity search.

4. **What is the purpose of the `embedding_function` parameter when creating a collection in Chroma DB?** 1 / 1 point

   ○ It determines how `documents` are grouped into collections.
   ● It defines the model used to convert documents into vector embeddings.
   ○ It specifies the distance metric used for similarity search.
   ○ It defines the type of metadata stored in the collection.

   ✓ Nice work

   The `embedding_function` specifies the model used to generate vector embeddings from documents.

5. **Which of the following changes requires cloning a collection in Chroma DB?** 1 / 1 point

   ● Changing the embedding model
   ○ Retrieving documents using the `get` method
   ○ Adding new documents
   ○ Updating `document` metadata

   ✓ Nice work

   Changing the embedding model or distance metric requires cloning the collection.
