1. An ecosystem is a community of organisms and their physical environment. Which of the following is NOT a part of an ecosystem?

☐ Soil

☒ Sun

☐ Water

☐ Air

At a given location, the community of organisms and their physical environment together form an ecosystem. The sun is not a part of the ecosystem, but it is a part of the environment.

2. The process of an organism's body breaking down food into smaller molecules is called metabolism. Which of the following is NOT a part of metabolism?

☐ Anabolism

☒ Catabolism

☐ Metabolism

☐ Synthesis

Metabolism is the process of an organism's body breaking down food into smaller molecules. It is divided into two parts: anabolism (building up) and catabolism (breaking down).

3. The process of an organism's body taking in oxygen and releasing carbon dioxide is called respiration. Which of the following is NOT a part of respiration?

☐ Glucose

☒ Oxygen

☐ Carbon dioxide

☐ Water

Respiration is the process of an organism's body taking in oxygen and releasing carbon dioxide. It is divided into two parts: aerobic respiration (using oxygen) and anaerobic respiration (not using oxygen).

4. The process of an organism's body taking in food and releasing waste is called excretion. Which of the following is NOT a part of excretion?

☐ Urine

☒ Feces

☐ Sweat

☐ Saliva

Excretion is the process of an organism's body taking in food and releasing waste. It is divided into two parts: internal excretion (removing waste from the body) and external excretion (removing waste from the environment).
