1. Which of the following statements correctly describe logs? Select two answers.

1 / 1 point

☐ Logs helps identify vulnerabilities and potential security breaches.☒ Correct☐ A business might log each time an employee accesses web-based services.☒ Correct☐ A log is used as a formal guide to incident response.☐ Security professionals use logs to automate tasks.

2. Which of the following tasks can be performed using SIEM tools? Select three answers.

1 / 1 point

☐ Providing alerts for specific types of risks☒ Correct☐ Proactively searching for threats☒ Correct☐ Performing incident analysis☒ Correct☐ Notifying authorities of illegal activity

3. A cybersecurity analyst needs to collect data from multiple places to analyze filtered events and patterns. What type of tool should they use?

1 point

☐ network protocol analyzer (packet sniffer)☐ Linux operating system☐ Playbook☐ Security information and event management (SIEM)☒ IncorrectPlease review [the video on tools](#).

4. Fill in the blank: Security professionals use _____ to help them manage a security incident before, during, and after it has occurred.

1 / 1 point

☐ programming☐ charts☐ spreadsheets☒ playbooks☒ Correct

5. As a security analyst, you are tasked with auditing your organization's network to identify security related issues. Now might a network protocol analyzer (packet sniffer) help you perform this task?

1 / 1 point

☐ By removing malware and viruses from the network☒ By capturing and analyzing data traffic on the network☐ By automating tasks that reduce human error☐ By simulating attacks on connected devices☒ Correct

6. What are some key benefits of programming languages? Select all that apply.

0.8 / 1 point

☐ They filter through data points faster than humans can working manually.☐ They install security hardware.☒ They execute repetitive processes accurately.☒ Correct☐ They can be used to create a specific set of instructions for a computer to execute tasks.☒ Correct☒ You didn't select all the correct answers

7. A security team wants to examine logs to understand what is occurring within their systems. Why might they choose Linux to perform this task? Select two answers.

1 / 1 point

☐ It is open source.☒ Correct☐ It is proprietary.☒ It allows for text-based commands by users.☒ Correct☐ It is an efficient programming language.

8. Fill in the blank: Security professionals can use _____ to interact with and request information from a database.

1 / 1 point

☐ playbooks☒ SQL☐ network protocol analyzers (packet sniffers)☐ logs☒ Correct

9. What are some key benefits of using Python to perform security tasks? Select all that apply.

1 / 1 point

☐ It automatically eliminates sensitive information.☒ It helps security professionals work with high levels of detail.☒ Correct☐ It simplifies repetitive tasks.☒ Correct☐ It enables security professionals to be more accurate.☒ Correct
