1. What tool is designed to capture and analyze data traffic within a network?

1 / 1 point

- ☐ security information and event management (SIEM)
- ☐ Structured Query Language (SQL)
- ☐ playbook
- ☐ network protocol analyzer (packet sniffer)

☒ Correct

A packet sniffer, also known as a network protocol analyzer, is a tool designed to capture and analyze data traffic within a network.

2. What type of tool uses dashboards to organize data into categories and allows analysts to identify potential security incidents as they happen?

1 / 1 point

- ☐ Linux
- ☐ Python
- ☐ network protocol analyzers (packet sniffers)
- ☐ SIEM

☒ Correct

SIEM tools use dashboards to organize data into categories and allow analysts to identify potential security incidents, such as breaches, as they happen.

3. What can cybersecurity professionals use logs for?

1 / 1 point

- ☐ To select which security team members will respond to an incident
- ☐ To research and optimize processing capabilities within a network
- ☐ To identify vulnerabilities and potential security breaches
- ☐ To analyze data traffic within a network

☒ Correct

Cybersecurity professionals can use logs to identify vulnerabilities and potential security breaches, as well as other potential security incidents.

4. Fill in the blank: A _____ is a manual that provides details about operational actions.

1 / 1 point

- ☐ checklist
- ☐ directory
- ☐ case history
- ☐ playbook

☒ Correct

A playbook is a manual that provides details about operational actions. Playbooks provide guidance when handling a security incident before, during, and after it has occurred.
