

Tools of the Trade: Linux and SQL ×

Module 1 ▼
Introduction to operating systems

Module 2 ▼
The Linux operating system

Module 3 ▲
Linux commands in the Bash shell

Navigate the Linux file system

- ✓ Welcome to module 3
Video • 1 min
- ✓ Linux commands via the Bash shell
Video • 3 min
- ✓ Core commands for navigation and reading files
Video • 4 min
- ✓ Navigate Linux and read file content
Reading • 8 min
- ✓ Activity: Find files with Linux commands
Ungraded App Item • 30 min
- ✓ Optional Exemplar: Find files with Linux commands
Ungraded App Item • 10 min
- ✓ Exemplar: Find files with Linux commands
Reading • 8 min
- ✓ Test your knowledge: Navigate the Linux file system in Bash
Practice Assignment • Grade: 80%

Manage file content in Bash

- ✓ Find what you need with Linux
Video • 4 min
- ✓ Filter content in Linux
Reading • 8 min
- ✓ Activity: Filter with grep
Ungraded App Item • 30 min
- ✓ Optional Exemplar: Filter with grep
Ungraded App Item • 10 min
- ✓ Exemplar: Filter with grep
Reading • 4 min
- ✓ Create and modify directories and files
Video • 7 min
- ✓ Manage directories and files
Reading • 8 min
- ✓ Identify: Key Linux commands
Ungraded Plugin • 10 min
- ✓ Activity: Manage files with Linux commands
Ungraded App Item • 30 min
- ✓ Optional Exemplar: Manage files with Linux commands
Ungraded App Item • 10 min
- ✓ Exemplar: Manage files with Linux commands
Reading • 10 min
- ✓ Test your knowledge: Manage file content in Bash
Practice Assignment • Grade: 100%

Glossary terms from module 3

00 0:32 / 1:21  1x  

Terms and definitions from Course 4, Module 3

Absolute file path: The full file path, which starts from the root

Argument (Linux): Specific information needed by a command

Authentication: The process of verifying who someone is

Authorization: The concept of granting access to specific resources in a system

Bash: The default shell in most Linux distributions

Command: An instruction telling the computer to do something

File path: The location of a file or directory

Filesystem Hierarchy Standard (FHS): The component of the Linux OS that organizes data

Filtering: Selecting data that match a certain condition

nano: A command-line file editor that is available by default in many Linux distributions

Options: Input that modifies the behavior of a command

Permissions: The type of access granted for a file or directory

Principle of least privilege: The concept of granting only the minimal access and authorization required to complete a task or function

Relative file path: A file path that starts from the user's current directory

Root directory: The highest-level directory in Linux

Root user (or superuser): A user with elevated privileges to modify the system

Standard input: Information received by the OS via the command line

Standard output: Information returned by the OS through the shell

Mark as completed

Hi, Venkatesh!
How can I help?

Explain this topic in simple terms

Give me a summary

Give me practice questions

Give me real-life examples

Ask me anything
