1. Which of the following is not a Google Cloud load balancing service?

1 / 1 point

- ☐ Global external Application Load Balancer
- ☐ External proxy Network Load Balancer
- ☐ Regional external proxy Network Load Balance
- ☒ Global hardware-defined Load Balancer
- ☐ Regional external passthrough Network Load Balancer
- ☐ Regional internal Application Load Balancer

☒ Correct

Correct! Cloud Load Balancing is a fully distributed, software-defined, managed service for all your traffic. It is not an instance or device based solution, so you won't be locked into physical load balancing infrastructure.

2. Which load balancer is recommended for HTTP(S) traffic?

1 / 1 point

- ☐ Regional internal passthrough Network Load Balancer
- ☐ Regional internal proxy Network Load Balancer
- ☒ Global external Application Load Balancer
- ☐ Regional external passthrough Network Load Balancer
- ☐ Global external proxy Network Load Balancer

☒ Correct

Correct! For HTTP(S) traffic, it is recommended that you use an Application Load Balancer.

3. Which of the following are applicable autoscaling policies for managed instance groups?

3 / 4 points

☒ CPU utilization☒ Correct

That's correct.

☐ Load balancing capacity☒ Monitoring metrics☒ Correct

That's correct.

☒ Queue-based workload☒ Correct

That's correct.
