Your grade: 100%

Incorrect: 00% • Correct: 00% • To pass you need at least 75%. We keep your highest score.

Total items: 4

1. What is the shell?

1 / 1 point

☐ Data consisting of an ordered sequence of characters

☐ Information received by the operating system (OS) via the command line

☐ An instruction telling the computer to do something

☐ The command line interpreter

☒ Correct

The shell is the command line interpreter. It processes commands and outputs the results.

2. After a user inputs a command into the shell, what can the shell return to the user? Select two answers.

1 / 1 point

☐ A request for user approval

☐ An error message

☒ Correct

☐ A request for more input from the user

☐ Output

☒ Correct

After a user inputs a command into the shell, the shell can return output or an error message to the user. Output is the program's response to the user's input. An error message occurs when the shell cannot interpret the input.

3. What is standard error in Linux?

1 / 1 point

☐ Information received by the operating system via the command line

☐ Error messages returned by the operating system through the shell

☐ Information returned by the operating system through the shell

☐ A Linux command that outputs a specified string of text

☒ Correct

Standard error contains error messages returned by the OS through the shell.

4. What is the difference between standard input and standard output?

1 / 1 point

☐ Standard input is sent from the operating system. Standard output is sent to the operating system.

☐ Standard input is sent from the filesystem through Standard Input (STD). Standard outputs are sent to the CPU.

☐ Standard input is sent to the Standard Input/Output Standard (STD). Standard outputs are sent from the CPU.

☐ Standard input is sent to the operating system. Standard output is sent from the operating system.

☒ Correct

Standard input is sent to the operating system. Standard outputs are sent from the operating system.
