1. What happens during a Denial of Service (DoS) attack? 1 / 1 point
- ☐ The network is infected with malware.
 - ☒ The target crashes and normal business operations cannot continue.
 - ☐ The attacker successfully impersonates an authorized user and gains access to the network.
 - ☐ The data packets containing valuable information are stolen as they travel across the network.
- Correct
2. Which of the following statements accurately describe Denial of Service (DoS) and Distributed Denial of Service (DDoS) attacks? Select three answers. 1 / 1 point
- ☒ A DDoS attack involves multiple hosts carrying out the attack.
 - Correct
 - ☒ A network device experiencing a DoS attack is unable to respond to legitimate users.
 - Correct
 - ☒ A DoS attack involves one host conducting the attack.
 - Correct
 - ☐ In both DoS and DDoS attacks, every part of the network must be overloaded for the attacks to be successful.
3. A security manager is training their team to identify when a server has experienced a SYN-flood attack. What might indicate to the team members that their organization is at risk? 1 / 1 point
- ☐ An oversized ICMP packet is sent to the network server.
 - ☒ The server has stopped responding after receiving an unusually high number of incoming SYN packets.
 - ☐ A large number of ICMP packets are delivered to the organization's servers.
 - ☐ The port numbers in the data packets are incorrect.
- Correct
4. Fill in the blank: The DoS attack _____ occurs when a malicious actor sends an oversized ICMP packet to a server. 1 / 1 point
- ☐ on-path
 - ☐ SYN flood
 - ☒ Ping of Death
 - ☐ smurf
- Correct
5. Which of the following statements correctly describe passive and active packet sniffing? Select three answers. 1 / 1 point
- ☒ Passive packet sniffing allows malicious actors to view the information going in and out of the targeted device.
 - Correct
 - ☒ Active packet sniffing involves data packets being manipulated in transit.
 - Correct
 - ☒ Using a VPN to encrypt data offers a business protection from packet sniffing.
 - Correct
 - ☐ The purpose of active packet sniffing is to read data packets while in transit.
6. As a security professional, you research on-path, replay, and smurf attacks in order to implement procedures that will protect your company from these incidents. What type of attack are you learning about? 1 point
- ☐ IP spoofing
 - ☐ Ping of death
 - ☒ Packet sniffing
 - ☐ SYN flooding
- Incorrect
Please review [the video about impersonation](#). ↗
7. Fill in the blank: _____ is a network attack performed when an attacker changes the source IP of a data packet to impersonate an authorized system and gain access to a network. 1 / 1 point
- ☒ IP spoofing
 - ☐ A DoS attack
 - ☐ SYN flooding
 - ☐ A KRACK attack
- Correct
8. In which attack do malicious actors impersonate a web browser or web server by placing themselves between the two devices, then sniffing the packet information to discover their IP and MAC addresses? 1 / 1 point
- ☐ Malware attack
 - ☐ Packet flooding attack
 - ☒ On-path attack
 - ☐ Smurf attack
- Correct
9. Fill in the blank: The _____ network attack occurs when an attacker intercepts a data packet in transit, then repeats it at another time. 1 / 1 point
- ☒ replay
 - ☐ SYN flood
 - ☐ on-path
 - ☐ smurf
- Correct
10. Which attack involves an attacker sniffing an authorized user's IP address and flooding it with packets? 1 / 1 point
- ☐ Ping of Death
 - ☐ On-path attack
 - ☒ Smurf attack
 - ☐ Replay attack
- Correct
