

Template: Prepare Data Model for Transaction Processing System

Use this template to enter your solution. You may modify the template to include more information.

Solution

Task 1: Understand the requirements

Step 1: Clearly outline the primary features and capabilities of a system. *Refer to the instructions for task 1 in the lab instructions.*

Primary features of the system

Step 2: Specify the data requirements necessary for the system to execute each operation effectively. *Refer to the instructions for task 1 in the lab instructions.*

Necessary data points

Task 2: Identify key entities

Clearly determine and define the primary components or building blocks of the system. *Refer to the instructions for task 2 in the lab instructions.*

Key entities	Description	Key attributes

Task 3: Define attributes for each entity

Identify and specify the key characteristics or properties that describe each entity. *Refer to the instructions for task 3 in the lab instructions.*

Key entities	Attributes and data types
