

Your grade: 100%

You scored 100% - You achieved 100% - To pass you need at least 80%. We keep your highest score.

Total items: 18

7. Which scenario is best suited for using Cloud Run instead of Cloud Run Functions?

1/1 point

- ☐ Moving images on demand when requested by a user through a web interface.
- ☐ Denoising thumbnails for images uploaded to a Cloud Storage bucket.
- ☐ Sending an email notification whenever a new document is added to a specific folder in Cloud Storage.
- ☐ Hosting a dynamic web application that allows users to upload and share photos.

☒ Correct.

Correct: This scenario requires a durable web application with persistent connections and state, necessitating a durable Cloud Run container environment and autoscaling capabilities.

8. Which of these statements about Cloud Run Functions are correct? Select three.

1/1 point

Cloud Run Functions:

- ☐ Can only be invoked by sending HTTP requests.
- ☐ Require servers to VMs to be provisioned.
- ☐ Its scalable functions are a server platform.

☒ Correct.

Correct: Cloud Run Functions is a service that enables you to build single-purpose functions that can automatically scale based on the number of requests to your function.

☐ Can be used to extend Cloud services.

☒ Correct.

Correct: Cloud Run Functions can be used as a connector layer to connect and extend other cloud services and create serverless applications.

☐ Is integrated with Cloud Logging.

☒ Correct.

Correct: Cloud Run Functions is integrated with Google Cloud/Stackdriver logging and monitoring services to make it fully observable.

9. Why might a Google Cloud customer choose to use Cloud Run Functions?

1/1 point

- ☐ Cloud Run Functions is the primary way to run C++ applications in Google Cloud.
- ☐ Their application contains event-driven code that they don't want to provision compute resources for.
- ☐ Cloud Run Functions is a free service for hosting compute operations.
- ☐ Their application has legacy monolithic structure that they want to separate into microservices.

☒ Correct.

Correct.
