Containers in the Cloud

Your grade: 100%

You scored: 100% • You targeted: 100% • To pass you need at least 80%. We keep your highest score.

Total items: 18

1. What is a Kubernetes pod?

1/1 point

☐ A group of files

☐ A group of containers

☐ A group of clusters

☐ A group of nodes

☒ Correct

That's correct. In Kubernetes, a group of one or more containers is called a pod. Containers in a pod are designed together. They are created, managed, and terminated as a group.

The simplest workload that Kubernetes can deploy is a pod that consists only of a single container.

2. Where do the resources used to build Google Kubernetes Engine clusters come from?

1/1 point

☐ Cloud Storage

☐ App Engine

☒ Compute Engine

☐ Bare-metal servers

☒ Correct

Correct! Because the resources used to build Google Kubernetes Engine clusters come from Compute Engine, Google Kubernetes Engine gets to take advantage of Compute Engine's and Google VPC's capabilities.
