Data analysis

Correct

Programming and data analysis are technical skills, which are needed to become an entry-level security analyst.

Regulation writing

3. Fill in the blank: \_\_\_\_\_ identify, analyze, and preserve criminal evidence within networks, computers, and electronic devices.

1 / 1 point

Business intelligence professionals

Security operations center analysts

Ethical hackers

Digital forensic investigators

Correct

Digital forensic investigators identify, analyze, and preserve criminal evidence within networks, computers, and electronic devices.

4. What are examples of sensitive personally identifiable information (SPI) that cybersecurity professionals need to protect? Select two answers.

1 / 1 point

Email addresses

Bank account numbers

Correct

Medical records and bank account numbers are examples of sensitive personally identifiable information. SPI is a specific type of PII that requires stricter protections because it can be significantly more damaging to individuals if it is stolen.

Last names

Medical records

Correct

Medical records and bank account numbers are examples of sensitive personally identifiable information. SPI is a specific type of PII that requires stricter protections because it can be significantly more damaging to individuals if it is stolen.
