1. Emma is a business analyst who needs to convert unstructured meeting notes into a BPM diagram using generative AI. What should Emma do first?

1 / 1 point

- ☐ Directly input the notes into a BPMN tool
- ☒ Identify key processes and entities in the notes
- ☐ Translate the notes into user stories first
- ☐ Use generative AI to automate all customer service tasks, eliminating the need for a workflow

 **Correct**

Identifying key processes and entities is essential to structuring the information into a BPMN diagram.

2. Alex is a systems architect at a tech company and needs to integrate generative AI with business analysis platforms such as Jira and Power BI to improve deliverable quality and efficiency. Which of the following is the best approach for Alex to achieve this integration?

1 / 1 point

- ☒ Utilize APIs provided by the platforms to connect and automate data flow
- ☐ Install additional plugins that might not be compatible with current systems
- ☐ Manually export and import data between the platforms on a regular basis
- ☐ Develop a custom software solution from scratch to handle the integration

 **Correct**

Using APIs allows for seamless integration and automation of data flow between generative AI and business analysis platforms.

3. As a business analyst, how can David use generative AI to improve the efficiency of documenting user stories from unstructured inputs?

1 / 1 point

- ☐ Use AI to generate documentation without context
- ☐ Depend on AI to make decisions without human oversight
- ☐ Use AI to replace stakeholder interviews
- ☒ Use AI to automate the conversion of inputs into structured formats

 **Correct**

Generative AI can automate the process of converting unstructured inputs into structured documentation such as user stories.

4. Nina is a business analyst at a tech company and needs to integrate generative AI with Jira to improve deliverable quality. Which of the following actions should Nina take to ensure a successful integration?

1 / 1 point

- ☐ Develop a separate AI tool independent of Jira for task management
- ☒ Configure the AI to automatically generate reports based on Jira data
- ☐ Integrate AI to send automated notifications for every task update in Jira
- ☐ Use AI to replace Jira's core functionalities with automated processes

 **Correct**

Configuring AI to generate reports from Jira data can enhance deliverable quality by providing timely insights.

5. Olivia is a systems architect tasked with improving business processes using generative AI. How should Olivia apply prompt engineering to gather accurate business requirements?

1 / 1 point

- ☒ Use AI to generate user stories from unstructured data
- ☐ Use AI to generate random outputs for brainstorming
- ☐ Directly input data into dashboards without analysis
- ☐ Ignore AI tools and rely solely on manual processes.

 **Correct**

AI can be used to convert unstructured data into structured user stories.

6. Liam, a systems analyst, needs to gather business requirements from unstructured data using generative AI. Which approach should Liam apply?

1 / 1 point

- ☐ Generate random user stories
- ☐ Create BPMN diagrams
- ☐ Use manual transcription of data
- ☒ Use prompt engineering to extract key information

 **Correct**

Prompt engineering helps in structuring unstructured data into usable formats.
