

The Azure Architect's Blueprint

Designing Data Storage and Integration Solutions in Azure

Level: Intermediate

Duration: 8 Hours

AZ-305 Specialization Alignment

In Partnership with
Coursera & Packt

The Modern Data Mandate

Scaling compute and I/O to meet enterprise workload demands.

Enterprise environments demand exact equilibrium. This 8-hour masterclass provides the exact engineering blueprint to architect that balance on Microsoft Azure.

Optimizing storage footprints without sacrificing accessibility.

Implementing mandatory encryption, IAM, and durability requirements.

Your 8-Hour Capability Expansion

The Master Plan: Constructing the Blueprint

The Foundation: Relational Storage Controls

Module 1 (2 Hours)

Key Architect Capabilities

- **Size & Scale:** Precisely calculate and provision database service tiers to support targeted workloads.
- **Protect:** Implement robust encryption strategies for strong data protection at rest and in transit.
- **Govern:** Apply relational principles to ensure structured data integrity.

The Flexible Layer: Non-Relational Storage

Module 4 (1 Hour)

Key Architect Capabilities

- **Schema-Agnostic Design:** Architect solutions for semi-structured and non-relational data without rigid structural constraints.
- **Format Matching:** Align specific NoSQL architectures to the exact ingestion requirements of the application.
- **Scale-Out:** Design for massive, distributed horizontal scaling.

Diagnostic Matrix: Structuring the Data

	Relational (Module 1)	Non-Relational (Module 4)
Data Structure	Strict schema enforced. Data is normalized into precise tables, rows, and columns.	Schema-agnostic. Data is stored natively as interconnected graphs, documents, or key-values.
Scaling Strategy	Primarily Vertical. Involves sizing service tiers, scaling compute and memory.	Primarily Horizontal. Designed for massive, distributed node clusters.
Workload Alignment	Requires absolute transactional integrity and complex, multi-table querying.	Requires high-velocity ingestion of diverse, unstructured, or rapidly changing formats.

Knowing what they are is basic IT. Knowing when to use which is architecture.

The Nervous System: Designing Data Integration

Module 2 (1 Hour)

Disparate
Enterprise Origins

Integration Hub
(Sanitize & Transform)

Secure Downstream
Analytics

The Brain: Strategic Storage Recommendation

Module 3 (1 Hour)

Key Architect Capabilities

Analyze: Evaluate modern business requirements against strict technical constraints.

Balance: Mathematically and logically weigh budget against necessary performance outputs.

Recommend: Confidently propose the exact data storage solution that satisfies all stakeholders.

The Shield: Backup & Disaster Recovery

Module 5 (3 Hours)

Ensure Reliability:

Architect high durability into every layer of the storage environment.

Plan Failovers:

Design comprehensive recovery plans tailored to complex, multi-site setups.

Guarantee Continuity:

Protect enterprise data against catastrophic failures and ensure zero-downtime.

Synthesis: The Unified Azure Data Ecosystem

8 hours of focused learning.
5 integrated modules.
1 complete enterprise blueprint.

Is This Blueprint For You?

Target Profile Diagnostic

Designed for: IT Professionals, Data Architects, System Engineers, and Security Specialists.

Prerequisites: Basic working knowledge of Microsoft Azure cloud computing concepts.

The Career ROI

The Career ROI: This course acts as the definitive data architecture component of the Designing Microsoft Azure Infrastructure Solutions (AZ-305) Specialization. Earn a shareable career certificate to validate your expertise.
