Your grade: 100%

You have **100%**. • Your highest: **100%**. • To pass you need at least 80% We keep your highest score.

Next Item

1. Which technology is primarily used to protect data at rest in Oci? 1 / 1 point

- Firewalls
- Encryption
- Sql, Server Profiler
- Monitoring

Nice work

Correct Encryption is the key technology for protecting data at rest.

2. Which of the following best describes the consistency requirements of a relational database management system (RDBMS)? 1 / 1 point

- All transactions must leave the database in a consistent state, adhering to defined rules.
- All transactions must be executed in any single specific.
- Transactions can be rolled back at any time without exerting penalties.
- All database schema changes must propagate instantly.

Nice work

Correct Consistency in RDBMS ensures that every transaction will change the database from one valid state to another.

3. What advantage does a graph database offer over a traditional RDBMS? 1 / 1 point

- Greater scalability for unstructured data.
- Ability to perform Recreational and Immersive queries.
- Supports Oci ACID transactions in distributed systems.
- Optimized for storing Wins series data.

Nice work

Correct Graph databases efficiently manage and traverse complex relationships and interactions.

4. Which scenario is most suitable for using a column-family database? 1 / 1 point

- Device management in web applications
- Time-series data analysis.
- Document metadata storage.
- Real-time inventory management

Nice work

Correct Column-family databases are excellent for handling large datasets with time-series characteristics.

5. Which of the following is a prime candidate for object storage? 1 / 1 point

- Item locator data
- Virtual machine disk images
- Transactional journal entries
- Financial net balances requiring real-time updates

Nice work

Correct Object storage is highly suitable for large, static files like virtual machine images.
