Practice Quiz: Application Development Workflow with Generative AI

Practice Assignment • 10 min

Due Aug 18, 11:59 PM IST

Your grade: 100%

Your latest: **100%** • Your highest: **100%** • To pass you need at least 60%. We keep your highest score.

Next item →

1. **John, an AI engineer at TechCorp, is tasked with choosing an AI model for a new project. He needs to ensure the model can handle large datasets efficiently and optimal processing. Which factor should he prioritize when selecting a model?**

1 / 1 point

○ Deployment method
○ Cost of the model
○ The developer's reputation
● Model size and performance

✓ Nice work

Prioritizing model size and performance ensures the model can handle large datasets efficiently, balancing speed and accuracy.

2. **Sarah is building an AI-powered application for DataSync Inc. that will process customer support tickets and return structured data for their workflow system. What techniques should she focus on when crafting prompts to ensure consistent, valid JSON outputs from the language model?**

1 / 1 point

● Crafting prompts that clearly articulate the use case and problem
○ Ignoring the model's guardrails
○ Using complex language
○ Focusing on the model's training data

✓ Nice work

Crafting clear prompts ensures that the application generates reliable and actionable JSON responses by accurately capturing the use case.

3. **Mark, a developer at InnovateTech, has shortlisted several AI models for a business application. How should he identify the most suitable model for the use case?**

1 / 1 point

○ Rely on the model with the fastest response time
○ Select the smallest model to reduce costs
○ Choose the model based on its popularity
● Use the same prompt to test different models

✓ Nice work

Testing models with the same prompt helps compare how well each fits the use case.

4. **Emily, a developer at CodeSolutions, is evaluating Llama 3, Granite, and Mixtral for integration into a new application. What should she consider when choosing the most suitable model?**

1 / 1 point

● Evaluate model performance, accuracy, and reliability
○ Choose the model with the largest number of features
○ Rely on the model's documentation quality
○ Select the model with the fastest response time

✓ Nice work

Evaluating performance, accuracy, and reliability helps choose the most suitable model for the application.

5. **Lucas, a developer at DataGen, is experimenting with different prompting techniques. Which technique involves providing examples to guide the AI's responses?**

1 / 1 point

○ Zero-shot prompting
● Few shot prompting
○ Chain of thought prompting
○ Random prompting

✓ Nice work

This technique provides example input-output pairs to guide the model's responses.
