Graded Quiz: Building Apps with RAG
Graded Assignment • 21 min

Your grade: 100%

Your latest: **100%** • Your highest: **100%** • To pass you need at least 71%. We keep your highest score.

---

1. **What is the primary purpose of using the gr.Interface function in Gradio?** 1 / 1 point

○ To optimize the performance of machine learning models
● To create interactive web interfaces for Python functions
○ To compile Python code into executable files
○ To manage user authentication and authorization

✓ Nice work

The gr.Interface function is used to create interactive web interfaces that connect with Python functions, allowing users to interact with them via customizable input and output components.

2. **Alex is working on a machine learning project and wants to create a web-based user interface for his model using Gradio. He has written the Python code for the model and defined the necessary functions. What next steps should he follow to set up the Gradio interface?** 1 / 1 point

○ Define the backend logic, configure input fields using HTML, and deploy the interface on a cloud platform.
● Use Gradio's interface class to specify inputs and outputs, configure the interface, launch the Gradio server, and access the web interface through a URL.
○ Install the Gradio package, use gr.Textbox for input, launch the server, and access the web interface.
○ Create a web interface manually, integrate it with the Python code, and deploy using Flask.

✓ Nice work

After writing the Python code, Alex should use Gradio's interface class to specify inputs and outputs, configure the interface, launch the server, and access the web interface.

3. **Jamie wants to create a Gradio interface that allows users to input both text and numeric values. What components of Gradio should Jamie use to achieve this?** 1 / 1 point

○ Create custom HTML input fields for text and numeric input and integrate them with Gradio.
● Use gr.Textbox for text input and gr.Number for numeric input, then pass them as a list of inputs in the Gradio interface.
○ Utilize gr.Interface for both text and numeric inputs, and define the input types in the backend code.
○ Use gr.File for text input and gr.Number for numeric input, then configure the interface.

✓ Nice work

Jamie should use gr.Textbox for text input and gr.Number for numeric input and pass them as a list of inputs in the Gradio interface.

4. **How can you ensure that Gradio's Slider component outputs an integer value?** 1 / 1 point

○ By setting only the minimum and maximum parameters to integers.
○ By setting the minimum, maximum, and value parameters to integers.
● By setting the minimum, maximum, value, and step parameters to integers.
○ By setting the value parameter to an integer.

✓ Nice work

If the minimum, maximum, value, and step parameters are all integers, the Slider will output integer values.

5. **Gradio's Interface class wraps around which of the following?** 1 / 1 point

● A "function"
○ A "for" loop
○ A "dict"
○ A "list"

✓ Nice work

The Interface class wraps around a function. Each parameter of the function represents a specific input component. The function should produce either a single value or a tuple, where each element in the tuple corresponds to a distinct output component.

6. **Which Gradio input type allows users to select multiple values from a predefined checkbox list?** 1 / 1 point

● CheckboxGroup
○ Radio
○ Checkbox
○ Dropdown

✓ Nice work

The CheckboxGroup input type allows users to select multiple values from a checkbox list.

7. **Arthur wants to force his application's users to select one of three mutually exclusive venues for an upcoming party. Which of the following would best suit his needs?** 1 / 1 point

○ Checkbox
● Dropdown
○ Textbox
○ SortedList

✓ Nice work

The Dropdown type allows a user to select only one value from a dropdown list by default, or if "multiselect" is set to False.
