What is manual tool cutting?

Manual tool cutting is a technique used to cut a string into smaller pieces. It is often used to cut a string into pieces of a specific length, such as 10 characters. This is useful for creating a list of substrings from a single string.

Key concepts

String	A sequence of characters, such as "Hello, World!".
Substring	A portion of a string, such as "Hello" or "World!".
Length	The number of characters in a string or substring.
Index	A number representing the position of a character in a string, starting from 0.
Step	The number of characters to skip between each cut.
Start	The starting index of a substring.
End	The ending index of a substring.
Overlap	Whether the substrings overlap or not.
Padding	Whether to add padding to the substrings.
