Your grade: 100%
 Your lowest: 100% > Your highest: 100% > To pass, you need at least 75%. We keep your highest score.

Page 1/8

1. You're building a WC2Fut.
- ☐ JCR
 - ☐ CR
 - ☐ WTH
 - ☐ Why there are people

Starlink
Corps 3. They have a standard format that can be used for the response header and payload format. We usually use JSON, but both XML and CSV are valid.

5.2.3. *gustid*

- ☐ a. bill arrear code
- ☐ b. bill exception
- ☐ c. bill arrear code
- ☐ d. bill arrear code
- ☒ e. bill arrear code

Hint: Code 400 is a HTTP status code indicating that a request could not be processed due to an apparent syntax error.

0.25 points

3. With Maven would should I factor app test profiles?
- ☐ Over-configuration: Information in your source repository for every environment
 - ☐ Explicitly declare and isolate dependencies
 - ☐ Easy development, testing, and production as similar as possible
 - ☐ Test logs as event streams and aggregate logs into a single source

✎ Note
Correct. Code and config should be separated. Config can be versioned and deployed but code does not. The true test is whether the dependency could be gone without compromising any customers.

8. You're on a cloud-hosted SaaS application and notice a security alert on the web servers, but it's a false alarm. This has caused some performance issues with your users though. What might be the best way to fix this?
- ☐ Increase the number of web servers and use a load balancer in the cloud solution.
 - ☒ Use a caching service like Redis or Memcached.
 - ☐ Increase the number of CPUs in the cloud solution.
 - ☐ Reduce the size of web servers until the issue goes away.

Microsoft
 CoreX, Service as a Managed Solution, and a service like Microsoft Azure provides a cloud-based solution to manage data. They enable services to be managed, and support scale and high availability.
