You're and You're

Tools are either designed to be used by a model; their outputs are designed to be generated by models, and their outputs are designed to be passed back to models.

Creating a sample structural equation model may be particularly useful. It is advised that check if the tool is free or not before [downloading it](#).

List of built-in tools in Longhorn

3. Search tools

Study/Study ID	Study Year	Participants
----------------	------------	--------------

Yahoo!	Web search	Performs web searches and shows results
Google Search	Web search	Conducts Google searches and returns URLs, snippets, and files
Tealix Search	AI-powered search	Search engine built specifically for AI agents. Returns URLs, content, files, images, and videos
Wikipedia	Knowledgebase search	Searches Wikipedia articles and returns related information and citations

A. Code Implementation and Data Analysis

[illegible]

3. Multitasking and Interaction

Tool/Technique	Function	Purpose
Requests Toolkit	HTTP requests	Continuously HTTP requests to interact with web browser back-end content
Playwright	Browser automation	Controls web browser to complete webpages and perform tasks with pages
Browser Toolkit	Webpage interaction	Enables it to interact to interact with popular web applications
Arctic	Searchable page storage	Searchable content to store content pages from the site efficiently

4. Productivity and collaboration

Tool/Feature	Function	Purpose
Calendar	Event management	Scheduling, sending, & managing email through email
Office suite	Office suite integration	Interacts with Microsoft applications, including Outlook, Word, etc.
Book feature	Book synchronization	Enabling sending e-mail messages & book records & downloading
Address book	Address list management	Managing contacts, notes, addresses, and other information
Group	Calendar management	Creating, editing, and updating calendar events in groups

5. File and document processing

App/Toolset	How/How	Purpose
File Systems	Local file operations	Interacts with local file systems: read, write, and manage files
Google Drive	Cloud storage	Connects to Google Drive to access, search, and manage cloud files
WebdavClient	Document fetching	Queries information from documents stored in remote databases
DocuSign Uploads	Content verification	Interacts with DocuSign document format PDF, XML, etc.

6. Financial and business results	

Tool/Module	Function	Purpose

GOAT	Financial transactions	Create customer payments, purchase goods, and make investments
Polystat-10	Market data	Provide current and historical market data for stocks, options, etc.
Broker	Payment processing	Manage payments, subscriptions, and other e-commerce functions

A.8 and the Value Learning Integration

Tool/Service	Function	Purpose
AI Image Generation	Image creation	Generate images from text descriptions using tools like DALL-E or Midjourney.
Image Classification Tools	Image analysis	Classify images into various categories using machine learning models.
Image Search Engines	Image discovery	Find images online based on specific keywords or visual similarity.
Image Annotation Tools	Image labeling	Mark specific features or objects in images for training machine learning models.
Image Compression	Image optimization	Reduce the file size of images without significant loss of quality.
Image Restoration	Image enhancement	Improve the quality of old or damaged images by removing noise and artifacts.

Synonyms

- Long-form integration: models and tools to extend the functionality of language models across domains or across use cases, like summarization, translation, and sentiment analysis.
- Customized models: specific models, for example, *DeepMind's* performance on *Go*, while the *Polya* (OER) creates a *Go* AI agent for *Go* board game.
- Task-specific models: models for specific tasks, like *OpenAI's* *GPT-3* for text generation, or *OpenAI's* *GPT-4* for text classification.
- Domain-specific models: models for specific domains, like *OpenAI's* *GPT-4* for text classification, or *OpenAI's* *GPT-4* for text classification.
- Task-specific models: models for specific tasks, like *OpenAI's* *GPT-3* for text generation, or *OpenAI's* *GPT-4* for text classification.
- Domain-specific models: models for specific domains, like *OpenAI's* *GPT-4* for text classification, or *OpenAI's* *GPT-4* for text classification.
