1. You want to use `kubectl` to configure your cluster, but first you must configure it. Where does the `kubectl` command store its configuration file?

1 / 1 point

- ☒ The configuration information is stored in the `$HOME/.kube/config` file.
- ☐ `kubectl` uses the same authorization and credential tokens as the `gcloud` CLI utilities.
- ☐ The configuration information is entered in `Kubectrl` before executing commands.
- ☐ The configuration information is stored in environment variables in the current shell. when required.

✓ Nice work

That is correct.

2. You attempt to update a container image to a new version by using the “`kubectl describe pod` command,” but are not successful. The output of the command shows that the Pod status has changed to “Pending,” the state is shown as “Waiting,” and the reason shown is “ImagePullBackOff.” What is the most probable cause of this error?

1 / 1 point

- ☒ The container image failed to download.
- ☐ The container image pull policy has been set to “Never.”
- ☐ You specified an invalid container name.
- ☐ The latest container image has already been deployed.

✓ Nice work

That is correct.
