8 Popular Tasklist Project Guide

- 8.1 Project Structure
 - 8.1.1 I should pay more attention to working with Python and SQL files. Focus on the regular data entry, and the data analysis, and the working workflow.
 - 8.1.2 I should pay more attention to the data analysis, and the working workflow.
 - 8.1.3 I should pay more attention to the data analysis, and the working workflow.
 - 8.1.4 I should pay more attention to the data analysis, and the working workflow.
 - 8.1.5 I should pay more attention to the data analysis, and the working workflow.
 - 8.1.6 I should pay more attention to the data analysis, and the working workflow.
 - 8.1.7 I should pay more attention to the data analysis, and the working workflow.
 - 8.1.8 I should pay more attention to the data analysis, and the working workflow.
 - 8.1.9 I should pay more attention to the data analysis, and the working workflow.
 - 8.1.10 I should pay more attention to the data analysis, and the working workflow.
- 8.2 Technical Skills
 - 8.2.1 I should pay more attention to the data analysis, and the working workflow.
 - 8.2.2 I should pay more attention to the data analysis, and the working workflow.
 - 8.2.3 I should pay more attention to the data analysis, and the working workflow.
 - 8.2.4 I should pay more attention to the data analysis, and the working workflow.
 - 8.2.5 I should pay more attention to the data analysis, and the working workflow.
 - 8.2.6 I should pay more attention to the data analysis, and the working workflow.
 - 8.2.7 I should pay more attention to the data analysis, and the working workflow.
 - 8.2.8 I should pay more attention to the data analysis, and the working workflow.
 - 8.2.9 I should pay more attention to the data analysis, and the working workflow.
 - 8.2.10 I should pay more attention to the data analysis, and the working workflow.
- 8.3 Performance Metrics
 - 8.3.1 I should pay more attention to the data analysis, and the working workflow.
 - 8.3.2 I should pay more attention to the data analysis, and the working workflow.
 - 8.3.3 I should pay more attention to the data analysis, and the working workflow.
 - 8.3.4 I should pay more attention to the data analysis, and the working workflow.
 - 8.3.5 I should pay more attention to the data analysis, and the working workflow.
 - 8.3.6 I should pay more attention to the data analysis, and the working workflow.
 - 8.3.7 I should pay more attention to the data analysis, and the working workflow.
 - 8.3.8 I should pay more attention to the data analysis, and the working workflow.
 - 8.3.9 I should pay more attention to the data analysis, and the working workflow.
 - 8.3.10 I should pay more attention to the data analysis, and the working workflow.

```
Three New Commands
To make an experiment less "dry", tbls() now returns rows on tblinfo enforcement and data
portability.

1. Budget "Yahor" Check
python main.py budget -tblinfo

Factor: Compares current spending against predefined monthly limits. It returns a color-coded
result (green "tblinfo", changing to red) "tbl to spend" - money remains to be spent on month.

2. Smart Category Migration
python main.py category -merge tbls_color() -tbls_color()

Factor: Here is a batch update in the database to move all historical expenses from one category to
another and delete the old category. It also does a cleanup of many tables.

3. No Ready Export
python main.py export -kurtal.pdf -day 201905

Factor: Downloads a chart.js PDF report that specifically tbls_color() expenses, based on tags.
It highlights tbls by category (a 1st level update for tbls_color() collection).

```
