

To pass this course, you must achieve 100% on 1 out of 2 parts. By completing this activity, you can earn a more advanced grade and qualify for a [Certificate of Completion](#).

Activity Overview

In this activity, you will assess the access controls used by a business, find evidence that controls prevent, identify risks, and make recommendations to improve their security practices.

Finally, you'll assess how **access control** security controls that manage access, authorization, and accountability of information. Authentication controls are used to verify who someone is, whereas authorization controls are used to grant or deny permissions based on what they're allowed to do. When done well, access control can be a key to increasing the robustness of a security risk.

We have completed this activity before moving on. The next section will provide you with a completed example to compare to your own work.

Scenario

Review the scenario below. Then complete the step-by-step instructions.

Here's the first phase of a professional threat to growing business.

Recently, a digital marketer for the business you're working for reports, "The finance manager says they didn't make a mistake. Excluding, they were able to stop the payment. The owner has asked you to investigate what happened to prevent any future incidents."

To do this, you'll need to do some accounting for the incident to better understand what happened. First, you will review the access log of the incident. Next, you will take notes and help your identity provider find out. Then, you will look at the access controls that were implemented by the owner. Finally, you will recommend mitigations that can be put in place to prevent any future incidents.

Step-By-Step Instructions

Follow the scenario and answer the questions below to complete this activity. Then, go to the next course link to compare your work to a completed example.

Step 1: Access The Incident

To see the background for this course, click the link below and select the template.

If you don't have a Google account, you can download this supporting materials directly from the attachment below.

Step 3: Review the event log of this payment incident

Event logs contain information related to the operation and usage of a system. They can be utilized to identify suspicious activity, detect vulnerabilities, and track users.

Find the **Event log** tab of the Accounting service spreadsheet. Carefully review the event log of this incident to start your investigation before moving on to Step 4. Note: This is a PDF file, so you will need to download it.

Make a **2** notes of information that you have read about the user from reviewing the Event log details. Add your notes to the **Notes** column of the access control incident.

Step 4: Identify access control issues that led to the incident

Log details tell you a lot about a specific event in time. We can find other useful details about an event by cross-referencing that information with other sources.

The business has a range of different employees. They all currently manage customer information using a shared cloud drive. Find the **Employee directory** tab of the supporting resources spreadsheet. Compare the directory to the employee directory tab and the information in the Event log tab. Notice any similarities between the details in the Event log and the details in the Employee directory.

Then, list 3 issues that you discover with how the business handles employee access to the **Issues** column of the Access control incident.

Step 5: Recommend mitigations that can prevent a future breach

To help implement your accounting of the investigation and document them, we will have the last part for this activity to document. Find the **Recommendations** column of the Access control incident. Based at least 3 recommendations of mitigations to the business to prevent a future breach to the future.

For example, we recommend an organization to have a password policy to make sure that users who are employees to no longer with the company.

What to Include in Your Response

- 2-3 notes about the user
- 3-4 access control issues
- 3 recommendations for access control mitigations

1. Did you complete this activity?

- ☒ Yes
- ☐ No
