Build a knowledge hub to answer questions instantly

0:02 / 0:18

In this lab, Owen from Google Marketing will show you how to use Gemini Notebook to create a centralized knowledge hub that's grounded in your specific sources. Your team will be able to query & using natural language. Gemini Notebook is useful for when you need to create a shared knowledge hub where your team can instantly find accurate answers directly from your project documents.

What you'll gain:

- Instant, accurate answers.** Give your team a way to find information without waiting for a reply.
- Reduced interruptions.** Spend less time answering routine questions and more time on focused work.
- A source of truth.** Ensure everyone on the team is working from the same information, based only on the documents you provided.

Apply what you learn:

In the lab, we'll demonstrate how to build a hub for a specific project launch. However, you'll get the most impact when you apply these techniques to your own work. For example, you could use this to onboard a new team member with HR documents and team guides, or to give your sales team a virtual expert who will help them get up to speed quickly. As you follow along, think about what documents you'll upload to unlock or support your team.

Let's build a hub that helps your team stay in sync and move faster!
