Build with AI: Risk assessment

To use the features covered in this lab, sign into Gemini using your Google Account.

As you follow the video instructions in this lab, customize the prompts below to fit your own work.

Feel free to pause the video as needed.

Lab tasks:

Step 1: Identify missing project dependencies

Click the "New chat" button to start a new chat with Gemini. Then, attach your project planning documents. If you don't have your own, you can use these sample materials: [sample prompt](#) and [sample launch schedule](#). Then, paste the prompt below and replace the text in [brackets] with your own details.

You are a [person], e.g. project manager. My company is launching a [product, service or initiative]. I've attached [document 1, e.g. a launch memo] and [document 2, e.g. a launch work-back schedule]. Are there any dependencies missing from the plan?

Review Gemini's analysis of missing dependencies and identify an area to focus on in the next step.

Step 2: Assess the risk of missing dependencies

In the same chat with Gemini, paste the prompt below and replace the text in [brackets] with your own details.

Let's focus on [a missing dependency from Gemini's previous responses]. How do they affect the [overall project goal, e.g. the launch]?

Step 3: Generate an updated project timeline

In the same chat with Gemini, paste the prompt below and replace the text in [brackets] with your own details.

Create a timeline listing key milestones for [the missing dependency from the previous step]. Flag what might be missing from my current plan.

Next steps:

The next time you have to create a plan for your project, try applying this process to reduce risks and make sure the project isn't missing any important steps. Adjust the prompts and steps to what works best for you and your workplace.

When you are satisfied with your outputs from this lab, you can close this page and return to the main screen of this cert.
