

Module 1

Build a research report with Gemini Deep Research

AI for research and insights

Video • 2 min

Learn what's the most convenient way you can use AI?

Video • 2 min

Generate research reports to gain insights

Reading • 2 min

Build with AI: Research report

Lab • 12 min

Y'all, what advice do you give your friends who want to use AI?

Video • 10 min

Module 2

Create and share research summaries in Gemini Notebook

Summarize information and share knowledge

Text

Reading • 2 min

Build with AI: Research summaries

Lab • 12 min

Module 3

Build an expert advisor with Gemini

Summarize information and share knowledge faster

0:04 / 0:22

In this lab, Mahi from Google DeepMind will show you how to use Gemini Notebook to synthesize information from multimedial inputs, such as text and videos. You'll start by uploading a collection of sources and generate useful summaries in the format that you prefer. Gemini Notebook is useful for when you need to synthesize information from multiple sources such as text, video, and audio into concise summaries with linked citations.

What you'll gain:

- Factor synthesis:** Quickly understand the key points from a large set of mixed-media documents
- Grounded knowledge:** Get reliable answers and insights drawn exclusively from your sources
- Flexible outputs:** Transform your sources into easy-to-understand summaries in different formats that match your audience's preferences.

Apply what you learn:

In the lab, we'll demonstrate how to synthesize research about design and color theory. However, you'll get the most out of this lab when you apply these techniques to your own work. As you follow along, think about how you could use Gemini Notebook to better understand information about your industry or project so you can take action faster.

Let's get ready to synthesize information more effectively!

Separate browser tab recommended. Please open this lab in a separate browser tab for the optimal experience (not side-by-side).
