Test your knowledge: SQL and databases

Graded Assignment • 30 min

Due Sep 23, 2:15 PM EDT

Your grade: 100%

You Scored 100% • You Passed 80.00% • To pass you need at least 75% to keep your highest score.

Next Item

1. Which statement most accurately describes the organization of a relational database? 1/1 point

- Relational databases consist of a single table with one primary key and one foreign key.
- Relational databases consist tables that are related to one another through primary and foreign keys.
- Relational databases consist of a single table containing related information.
- Relational databases contain primary keys with at least two duplicate values.

Nice work

A relational database is unstructured database containing tables that are related to each other through primary and foreign keys.

2. What's SQL used for? Select two answers. 1/1 point

- Securing an organization's systems and networks
- Finding data to support security-related decision and analysis

Nice work

SQL is a programming language used to create, interact with, and request information from a database. SQL's filtering syntax is used to find data to support security-related decisions.

- Creating, interacting with, and requesting information from a database

Nice work

SQL is a programming language used to create, interact with, and request information from a database. SQL's filtering syntax is used to find data to support security-related decisions.

- Attacking a service, a server, or a host's operating system

3. A record of attempts to connect to an organization's network is one example of a log. 1/1 point

- True
- False

Nice work

A record of attempts to connect to an organization's network is one example of a log. Logs are records of events that occur within an organization's systems.

4. Fill in the blank: A request for data from a database table or a combination of tables is called a _____. 1/1 point

- query
- SQL
- Avg
- vim

Nice work

A request for data from a database table or a combination of tables is called a query.
