1. What is the purpose of Virtual Private Networking (VPN)? 1 / 1 point

- To enable a secure communication method (a tunnel) to connect two trusted environments through an untrusted environment, such as the Internet.
- The main purpose is to encrypt data so that it can be stored in an encrypted format.
- It is a method to detect intruders at the edge of a network boundary.
- VPNs are also called access control lists, or ACLs, and they limit network access.

Correct
VPNs use IPSec tunnels to provide an encapsulated and encrypted path through a hostile or untrusted environment.

2. Which Google Cloud Interconnect service requires a connection in a Google Cloud colocation facility and provides 10 Gbps per link? 1 / 1 point

- Cloud VPN
- Partner Interconnect
- Dedicated Interconnect
- Carrier Peering
- Direct Peering

Correct
Correct! Dedicated Interconnect requires a connection in a Google Cloud colocation facility and provides 10 Gbps per link.

3. If you cannot meet Google's peering requirements, which network connection service should you choose to connect to Google Workspace and YouTube? 1 / 1 point

- Carrier Peering
- Dedicated Interconnect
- Partner Interconnect
- Direct Peering

Correct
That's correct! Carrier Peering allows you to connect to Google Workspace and YouTube without meeting Google's peering requirements.

4. Which of the following approaches to multi-project networking, uses a centralized network administration model? 1 / 1 point

- VPC Network Peering
- Cloud VPN
- Shared VPC

Correct
Correct! Shared VPC is a centralized approach to multi-project networking, because security and network policy occurs in a single designated VPC network.
