1. What are the purposes of performing a patch update for security hardening? Select all that apply.

1/1 point

- ☒ Upgrading an operating system to the latest software version.
- ☒ Preventing malicious actors from flooding a network.
- ☒ Requiring a user to verify their identity to access a system or network.
- ☒ Fixing known security vulnerabilities in a network or services.

2. What is the relationship between security hardening and an attack surface?

1/1 point

- ☒ Security hardening expands the attack surface.
- ☒ Security hardening increases the attack surface.
- ☒ Security hardening permanently eliminates the attack surface.
- ☒ Security hardening diminishes the attack surface.

3. Fill in the blank: Requiring employees to turn off their personal devices while in secure areas is an example of a _____ security hardening practice.

1/1 point

- ☐ cloud-based
- ☐ virtual
- ☐ network-focused
- ☒ physical

4. To help improve the security of a business, its in-house security team is approved to simulate an attack that will identify vulnerabilities in business processes. What does this scenario describe?

1/1 point

- ☐ Packet sniffing
- ☒ A Distributed Denial of Service (DDoS) attack
- ☐ Penetration testing
- ☐ The Ping of Death

5. What are some methods for hardening operating systems? Select three answers.

1/1 point

- ☒ Removing unused software to limit unnecessary vulnerabilities
- ☒ Implementing an intrusion detection system (IDS)
- ☒ Keeping an up-to-date list of authorized users.
- ☒ Configuring a device setting to fit a secure encryption standard

6. Fill in the blank: Aike _____ is a documented set of specifications within a system that is used as a basis for future builds, releases, and updates.

1/1 point

- ☒ hardware configuration
- ☐ virtual private network installation
- ☐ Internet control message protocol update
- ☐ network segment

7. Fill in the blank: The security measure _____ requires a user to verify their identity in two or more ways to access a system or network.

1/1 point

- ☐ hardware configuration
- ☒ multifactor authentication (MFA)
- ☐ password policy
- ☐ network log analysis

8. Which of the following statements accurately describes port filtering?

1/1 point

- ☐ A process performed by a VPN service that protects data by wrapping it in other data packets
- ☐ A security technique that divides a network into segments
- ☐ A security protocol that provides an encrypted tunnel for issuing commands from a remote server
- ☒ A firewall function that blocks or allows certain port numbers in order to limit unwanted network traffic

9. Fill in the blank: Security analysts use _____ to create isolated subnets for different departments in an organization.

1/1 point

- ☐ patch updating
- ☒ network segmentation
- ☐ penetration testing
- ☐ cloud hardening

10. What is one key similarity between regular web servers and cloud servers?

1/1 point

- ☐ In both, all data and application are stored together, regardless of their service category.
- ☒ They both require proper maintenance and security hardening.
- ☐ They both use hardware (in ages stored in the cloud to compare data.
- ☐ In both, all applications are stored together, regardless of their age.
