1. Fill in the blank: A key distinction between cloud and traditional network hardening is the use of a server baseline image, which enables security analysts to prevent _____ by comparing data in cloud servers to the baseline image. 1/1 point
- ☐ slow speeds
 - ☐ damaged data
 - ☐ improper resource storage
 - ☐ unwanted changes
 - ☒ Correct
- A key distinction between cloud and traditional network hardening is the use of a server baseline image, which enables security analysts to prevent unwanted changes by comparing data in cloud servers to the baseline image.
2. Data and applications on cloud networks do not need to be separated based on their service category, such as their age or internal functionality. 1/1 point
- ☐ True
 - ☒ False
- Correct. Similar to OS hardening, data and applications on a cloud network should be kept separate depending on their service category. For example, older applications should be kept separate from new applications. And software that deals with internal functions should be kept separate from client and applications seen by users.
3. Who is responsible for ensuring the safety of cloud networks? Select all that apply. 1/1 point
- ☐ Individual users
 - ☒ Correct
 - ☐ Cloud service provider
 - ☒ Correct
 - ☐ Security team
 - ☒ Correct
 - ☐ Research department
4. Fill in the blank: _____ cloud services are a common source of cloud security issues. 1/1 point
- ☐ Misconfigured
 - ☐ Unauthorized
 - ☐ Shared
 - ☐ Managed
 - ☒ Correct
- Misconfigured cloud services are a common source of cloud security issues.
