1. To connect an entire city, the most effective network type would be a local area network (LAN). — 1 / 1 point

   - ○ True
   - ◉ False

   > Correct
   > To connect an entire city, the proper network type would be a WAN. A LAN is a network that spans a small area; a wide area network (WAN) spans a large geographical area.

2. A security professional wants to ensure information is being broadcast to every computer on their organization's network. What device should they investigate? — 1 / 1 point

   - ○ Internet
   - ◉ Hub
   - ○ Router
   - ○ Modem

   > Correct
   > They would use a hub. A hub is a network device that broadcasts information like a radio tower.

3. What are some benefits of switches? Select all that apply. — 1 / 1 point

   - [x] They can improve network performance.

   > Correct
   > Some benefits of switches include the following: They control the flow of traffic, they can improve network performance, and they pass data to the intended destination.

   - [x] They only pass data to the intended destination.

   > Correct
   > Some benefits of switches include the following: They control the flow of traffic, they can improve network performance, and they pass data to the intended destination.

   - [x] They control the flow of traffic.

   > Correct
   > Some benefits of switches include the following: They control the flow of traffic, they can improve network performance, and they pass data to the intended destination.

   - [ ] They automatically install device-protection software.

4. Fill in the blank: The practice of using servers, applications, and network services that are hosted on the internet is called _____ computing. — 1 / 1 point

   - ○ uploadable
   - ○ connected
   - ○ website
   - ◉ cloud

   > Correct
   > The practice of using servers, applications, and network services that are hosted on the internet is called cloud computing.
