⚙️

In this lab, Carol from the Gemini team will show you how to use Gemini Canvas to build a business performance simulator that lets you test-drive different scenarios and see their impact in real time. Instead of struggling to explain "what-if" scenarios using rows of data or long explanations, you'll build custom, interactive tools you can experiment with in seconds. First, you'll ask Canvas to analyze your goals. Then, you'll build a visual tool with adjustable sliders to make your data come to life. You'll be able to see and effectively communicate how a single change, like a price shift or a deadline move, can impact the big picture through real-time, interactive feedback.

What you'll gain:

- **More Informed Decision-Making:** Move past "gut feelings" by building tools to simulate business scenarios, giving you a clearer path to your goals.
- **Adaptable Planning:** Quickly identify what changes or decisions will have the biggest impact, and test different outcomes on the fly to anticipate challenges before they happen.
- **Strategic Alignment:** Turn dense datasets into scannable, interactive visuals that help your team grasp the "why" behind a strategy without getting lost in the weeds.

Apply what you learn:

In this lab, we'll analyze and project the business performance of an e-commerce business. However, this method works for any situation where you need to visualize the impact of a change, like changing timelines, budgets, or resources. As you follow along, think about project changes you'd like to test-drive. Imagine the value of being able to interact with a Business Performance Simulator to instantly see the ripple effects of different choices before your team makes a final decision.

Ready to turn your static data into an interactive simulator? Let's get started.

**Google AI Pro recommended.** This lab is optimized for Google's most capable models. While you can use the no-cost version of Gemini, we recommend Google AI Pro for higher access to Google's advanced AI models and features. As a learner enrolled in this certificate, you are eligible for a complimentary 3-month trial subscription to help you build your portfolio. We encourage you to [activate your trial](#) before beginning this lab.
