If the Gemini app fails to load, navigate to the URL bar in your browser and manually enter gemini.google.com [↗](#).

To use the features covered in this lab, sign into Gemini using your Google Account.

As you follow the video instructions in this lab, customize the prompts below to fit your own work

Feel free to pause the video as needed.

The skills you learn in this lab will help you plan for different scenarios and catch potential problems before they happen, giving you and your team a clear roadmap for hitting your goals.

In the examples, we are visualizing the business performance of an e-commerce business, but you can use this to model marketing costs, plan for new hires, or manage your inventory levels.

Lab tasks:**Step 1: Identify your business levers**

Click the New chat button to start a new chat with Gemini. Then, paste the prompt below and replace the text in [brackets] with your own details. You can use this [sample data](#) [↗](#) or your own.

I'm a [your role] at [place of work e.g. an e-commerce business selling trousers]. My main goal is to [goal, e.g. increase my profit this year]. Acting as a business advisor, analyze my [type of data you upload to Gemini] and give me a list of the 3 most important changes I can make that would have the biggest impact on my goal.

Review the suggestions for potential changes that Gemini provides. You can ask Gemini to give you more options or iterate on them as well. You'll use these potential changes to create the interactive simulator in the next step.

Step 2: Build an interactive simulator

Now, you'll create an interactive simulator that lets you visualize the potential effect of the changes that Gemini suggested. In the same chat, select "Canvas" from the tools menu and paste the prompt below:

Based on those insights and my data, create an interactive [type of tool, e.g. profit calculator] for my [type of business]. Let me adjust [type of component e.g. toggles, sliders, switches] for each change to show their effect.

Adjust the variables and design of the tool to fit your needs. For example, you can adjust your average order value, current production spend, or monthly rent.

Step 3: Customize the design

Change the design to fit your needs. For example, you could ask Gemini to adjust the visual design to match your company's brand.

Can you give this [type of tool, e.g. profit calculator] more of a [type of design, color or theme]?

Step 4: Use the calculator

Try using your new tool to explore your idea. For example: move your sliders to reflect a 15% increase in your first variable. Use the calculator to help you find how much you would need to change your other sliders to keep your profit from dropping below a certain level.

Next Steps:

Whenever you need some help thinking about a hypothetical business idea or exploring outcomes from a change to your existing business, consider creating an interactive simulator. Doing so can help you test out ideas quickly to see what the results may be, and can also help you and your team understand the reasoning behind strategy decisions more easily than just showing them a spreadsheet.

When you are satisfied with your outputs from this lab, you can close this page and return to the main screen of this cert.
