If the Gemini app fails to load, navigate to the URL bar in your browser and manually enter gemini.google.com .

Build with AI: Clean data set

To use the features covered in this lab, sign into Gemini using your Google Account. You will also need to be logged in to use Sheets and Gemini in Sheets.

As you follow the video instructions in this lab, customize the prompts below to fit your own work.

Feel free to pause the video as needed.

Lab tasks:

Step 1: Extract and format data from an image

Click the "New chat" button to start a new chat with Gemini. Then, upload a source file. If you don't have your own, you can use this [sample screenshot](#) . Then, paste the prompt below and replace the text in [brackets] with your own details.

Extract the [data you want, e.g. reviews] from this [source, e.g. screenshot] and turn them into a [data format, e.g. table] with the following columns [column headers, e.g. date, text, and # of stars].

Gemini will generate a table. Select "Export to Sheets" and open the new file indicated on the bottom-left of your window to continue.

Step 2: Annotate your data

In Google Sheets, create a new column. Give it a descriptive name (e.g. "customer sentiment"). In the first data cell of that new column, enter the formula below. Replace the text in [brackets] with your own details, ensuring you reference the cell containing the review text (e.g. B2).

=AI("Analyze the [data to classify, e.g. customer feedback] and classify it into [category list, e.g. Positive, Neutral, or Negative]", [cell with customer feedback text, e.g. B2])

You can repeat this process as many times as you would like to add more columns with new formulas, just adapt the =AI formula prompt each time.

Once you're done, select the cells that contain Gemini's responses and click and drag the fill handle down to populate the formulas for all your reviews.

Next steps:

The =AI() function allows you to prompt Gemini on any cells you want, whether it's on a singular data point or an entire column. In your own work, think about where you might be able to use it to make more qualitative observations at scale.

When you are satisfied with your outputs from this lab, you can close this page and return to the main screen of this cert.
