Instructions

If the Gemini app fails to load, navigate to the URL bar in your browser and manually enter [docs.google.com/sheets](https://docs.google.com/sheets).

**Build with AI: Data analysis and visualizations**

To use the features covered in this lab, sign in to Gemini using your Google Account. You will also need to be logged in to use Sheets and Gemini in Sheets.

As you follow the video instructions in this lab, customize the prompts below to fit your own work.

Feel free to pause the video as needed.

**Lab tasks:****Step 1: Get a high-level data summary**

Import your data into a new Google Sheet. If you don't have your own, you can use this [sample CSV](#). To open Gemini in Google Sheets, click the Gemini icon in the top-right corner. In the Gemini sidebar, paste the prompt below and replace the text in [brackets] with your own details.

**This is data from [source of your data, e.g. my e-commerce website]. Provide the [first metric you want, e.g. total purchase revenue] and [second metric you want, e.g. total number of transactions].**

Review Gemini's summary. You can click "Analysis steps" to see the code Gemini generated.

**Step 2: Ask a question about your data**

In the same Google Sheet and Gemini sidebar, ask a question relevant to your dataset. For example:

**What is the average revenue per session based on channel, regardless of device category?**

Review the output. You will use this insight in the next step.

**Step 3: Use your data to build a narrative**

Open a new tab and navigate to the Gemini app by entering the URL [gemini.google.com](https://gemini.google.com). Paste the prompt below and replace the text in [brackets] with your own details to understand the "why" behind your data.

**You are an [persona, e.g. data analyst]. For an [your business type, e.g. e-commerce site], why might the [specific finding from Step 2]?**

Read Gemini's explanation. You will use this narrative to complement your data visualization.

**Step 4: Create a data visualization**

Switch back to the Google Sheets tab. In the Gemini sidebar, paste the prompt below and replace the text in [brackets] with your own details.

**Create a [chart type, e.g. bar chart] that shows [metric to visualize, e.g. average revenue per session] by [data column for chart axis, e.g. channel].**

Gemini will generate the chart and add it to your sheet. You can now use this visualization, along with the insights from the previous steps, in your reports or presentations.

**Next steps:**

Gemini in Sheets is great at helping you get a quick understanding of your data at a high level. Then, you can use its capabilities to focus on more detailed insights to prepare the visuals you need for your workplace. When using Gemini for data analysis, make sure to be responsible and check its analysis for accuracy.

When you are satisfied with your outputs from this lab, you can close this page and return to the main screen of this cert.
