1. You are a product manager preparing a recap for your company's executive board. The board's primary focus is understanding user adoption of a new software feature. You have a large dashboard of user data, but you are unsure which specific numbers the board will care about most.
- From the options below, how can you most effectively use Gemini to help you decide which data points to highlight?
- ☐ Prompt Gemini to take on the persona of a board executive and ask it to review a draft of your presentation then generate a summary on what data points to highlight.
- ☐ Ask Gemini to predict the most difficult questions the board might ask about the data points related to the software's overall user adoption rate.
- ☐ Ask Gemini for the best method to export your user dashboard data into a presentation slide so that the board can more easily visualize the data points you want to highlight.
- ☐ Get Gemini content about the board's focus on user adoption and ask it to recommend the top five metrics for your dashboard based off of the data you have access to.
- ☒ Nice work
2. You are a tailor. You are using Google Sheets to help you analyze unstructured customer feedback notes from recent clothing fittings, which are in Column B of your sheet. You notice that the notes are unclear and describe many different types of clothing alterations, making it difficult to track trends.
- From the options below, which formula and prompt combination is the most effective way to standardize these notes into specific business categories?
- ☐ =A1,"Categorize the following comments. Select only one category from these options: hemming, taking in, letting out, repairs, or other", B2)
- ☐ =A1,"List all the clothing issues mentioned in the feedback column. Select only one category from these options: hemming, taking in, letting out, repairs, or other", B2)
- ☐ =A1,"Read the comments and tell me what the customer is talking about so I can share it with the team", B2)
- ☐ =A1,"Rewrite this customer feedback so that it fits neatly into a standard tailoring category", B2)
- ☒ Nice work
3. You have just facilitated a leadership workshop and surveyed attendees after the session. You are using Google Sheets to help you organize a column of unstructured survey results to share with your team. You've organized the results into Column B of your sheet, and you need to assign each response to a specific topic (content, facilitation, and logistics) in Column C.
- What is the most effective way to complete this task using natural language functions in Sheets?
- ☐ Copy the reviews from Column B, upload them to the Gemini app, and ask it to recreate the table with the following categories in Column C: content, facilitation, and logistics.
- ☐ In cell C2, enter =A1,"Summarize the customer's comment in B2", then click and drag the bottom right of the cell down to populate the other rows.
- ☐ In cell B2, enter =A1,"Summarize the customer's comment in C2", then click and drag the bottom right of the cell down to populate the other rows.
- ☐ In cell C2, enter =A1,"Categorize the following response into one of these options: content, facilitation, and logistics", B2, then click and drag the bottom right of the cell down to populate the other rows.
- ☒ Nice work
4. You are an interior designer using Gemini in Google Sheets to help you analyze your invoice. You prompt Gemini to provide the total revenue and total number of transactions. Gemini outputs a total revenue figure of \$25,000. Before finalizing your quarterly financial report and sharing it with your accountant, you need to ensure this number is accurate.
- What is the most critical next step to evaluate the validity of this AI-generated summary?
- ☐ Review the \$25,000 figure against your knowledge of past performance data to confirm the numbers look realistic and correct.
- ☐ Prompt Gemini in Sheets to create a bar chart showing the revenue breakdown by channel to see if it visually matches the total.
- ☐ Open the Gemini app, assign it an experienced data analyst persona, and ask it to explain how it calculated the total purchase revenue.
- ☐ Use a spreadsheet formula, such as =SUM(range of cells), to calculate the total of the specific revenue column and verify it matches Gemini's output.
- ☒ Nice work
5. You are a human resources specialist. You import a spreadsheet file into Google Sheets containing raw data on employee training, including course completions, department names, and hours spent. You need to quickly understand the overall engagement for the month.
- From the options below, what is the most effective prompt to use with Gemini in Google Sheets to get an initial summary of overall engagement?
- ☐ "Review this sheet and provide a comprehensive summary that compares and contrasts the detailed engagement metrics for each department."
- ☐ "You are an experienced HR manager. Explain why the engineering department might have higher completion rates than the sales department."
- ☐ "This is data from our employee training program. Provide the total number of courses completed and the total hours spent."
- ☐ "Create a bar chart showing the average training hours completed by department."
- ☒ Nice work
6. You are a butcher. You are reviewing a spreadsheet of daily meat sales to understand which cuts are the most profitable this quarter. You notice that premium steaks have the highest average revenue, but you need to share this finding with your shop partner's wife and convince her. The raw data is detailed and unorganized, making it difficult to understand.
- From the options below, what is the most effective way to use Gemini to help make the data easier to understand?
- ☐ Ask Gemini Camas to create a presentation that displays the average revenue per cut of meat over the past 3 years to show historical trends and performance.
- ☐ Read through the data and apply yellow highlighting to the rows with the highest sales amounts, so the team can visually scan the most frequently purchased cuts.
- ☐ Open the Gemini app and use Nano Banana to create an infographic that displays the top three most popular cuts of meat, and how they can be prepared.
- ☐ Prompt Gemini in Sheets to create a bar chart that displays the average revenue per cut of meat, so the team can visually determine the most profitable meat cuts.
- ☒ Nice work
