Full Course Assessment
Graded Assignment • 1h

Due Aug 4, 11:59 PM IST

Your grade: 100%

Your latest: **100%** • Your highest: **100%** • To pass you need at least 80%. We keep your highest score.

1. What additional benefit does geo-redundant storage offer over locally redundant storage? 1 / 1 point

- (•) Provides geographic separation for disaster recovery
- ( ) Uses multiple disks within the same datacenter
- ( ) Improves read speed for frequently accessed data
- ( ) Reduces storage costs significantly

✓ Nice work

Correct! GRS provides geographic separation helping in disaster recovery scenarios.

2. In a disaster recovery scenario, why is it vital to seed data in a geographically distinct instance? 1 / 1 point

- ( ) Ensures data is available faster in localities
- (•) Prevents data loss during regional disasters
- ( ) Saves costs by reducing the need for multiple backups
- ( ) Improves compliance with all worldwide regulations

✓ Nice work

Correct! Geographic distinction ensures data survives regional disruptions.

3. What key feature distinguishes RA-GRS from GRS in Azure? 1 / 1 point

- ( ) It provides write access to the secondary location data.
- ( ) It ensures synchronous data replication between regions.
- ( ) It offers faster read speeds through local datacenter access.
- (•) It allows for read access to the secondary region's data.

✓ Nice work

Correct! RA-GRS allows read access to data in the secondary region.

4. Which Azure service is most suitable for hosting web applications and mobile app backends with integrated RESTful APIs? 1 / 1 point

- ( ) Azure Functions
- ( ) Azure Virtual Machines
- (•) Azure App Service
- ( ) Azure Kubernetes Service

✓ Nice work

Correct! Azure App Service is optimized for hosting web applications and APIs.

5. Under which scenario would you choose Azure Container Instances (ACI) over Azure Virtual Machines? 1 / 1 point

- ( ) Ensuring high availability across regions
- ( ) When you need full control over the operating system
- (•) Quickly deploying containerized applications with minimal management
- ( ) Running complex multi-tier web applications

✓ Nice work

Correct! ACI allows for simple, fast container deployment without managing VMs.

6. What feature in Azure Kubernetes Service automatically adjusts the number of nodes in a cluster based on parameters? 1 / 1 point

- ( ) Virtual Node Resizer
- (•) Cluster Autoscaler
- ( ) Manual Node Scaling
- ( ) Pod Density Adjuster

✓ Nice work

Correct! The Cluster Autoscaler automatically manages node scaling based on needs.

7. What is a key feature of Azure Event Grid that makes it suitable for event-based architectures? 1 / 1 point

- ( ) Supports long-term storage of events.
- ( ) Provides built-in backup and recovery options for event data.
- (•) Handles large numbers of discrete events for scalable event processing.
- ( ) Integrates tightly with Azure Batch for job scheduling.

✓ Nice work

Correct! It efficiently manages and routes large numbers of discrete events for processing.

8. How do Bicep templates differ from ARM templates in Azure? 1 / 1 point

- ( ) ARM templates are built on JavaScript syntax.
- (•) Bicep provides a simpler syntax than ARM templates.
- ( ) Bicep templates require extensive schema declarations.
- ( ) ARM templates cannot be deployed in Azure.

✓ Nice work

Correct! Bicep offers a more streamlined syntax, making it easier to use.

9. What is a primary advantage of using Infrastructure as Code in Azure deployments? 1 / 1 point

- ( ) Reduces need for software development plans.
- ( ) Eliminates the need for cloud architects.
- (•) Automates and standardizes cloud deployments.
- ( ) Simplifies manual resource scaling.

✓ Nice work

Correct! IAC allows for automated and standardized deployments, ensuring consistency and efficiency.

10. Why is Azure Key Vault recommended for storing application secrets? 1 / 1 point

- ( ) It offers integrated AI to manage access policies.
- ( ) It offers free unlimited storage for secrets.
- ( ) It performs automated backups of all data.
- (•) It ensures secrets are encrypted in transit and at rest.

✓ Nice work

Correct! Key Vault provides strong encryption for data both in transit and when stored.

11. When should Azure Event Hub be used instead of Event Grid? 1 / 1 point

- ( ) When needing direct integration with user interfaces.
- (•) When dealing with high-throughput data streaming needs.
- ( ) For routing discrete system events to applications.
- ( ) For low-latency message queuing.

✓ Nice work

Correct! Event Hub is optimized for high-throughput streaming scenarios.

12. In what scenario is an ARM template most beneficial in Azure? 1 / 1 point

- ( ) When deploying resources manually via the Azure Portal.
- ( ) For visualizing resource configurations in diagrams.
- ( ) For scripting complex logic into resource configurations.
- (•) For consistent, automated deployments of resources.

✓ Nice work

Correct! ARM templates ensure consistent and automated resource deployments, minimizing manual errors.

13. What main function does Azure Migrate serve? 1 / 1 point

- ( ) It automates software installation on Azure VMs
- ( ) It manages Azure billing and subscriptions
- ( ) It provides analytics dashboards for Azure resources
- (•) It assesses and migrates on-premises workloads to Azure

✓ Nice work

Correct! Azure Migrate is specifically designed to help organizations move their on-premises workloads to the cloud.

14. What is one key benefit of the Azure Storage Migration Service? 1 / 1 point

- ( ) Provides real-time analytics on data usage
- ( ) Establishes file synchronization across multiple sites
- (•) Eases migration of unstructured data to new systems
- ( ) Automates software installations on migrated systems

✓ Nice work

Correct! It efficiently handles large volumes of unstructured data during migrations.

15. Before migrating databases, what is one essential setup that must be done in Azure? 1 / 1 point

- ( ) Initiate a support plan upgrade
- ( ) Create an Azure Cosmos DB
- ( ) Deploy a new Azure Virtual Machine
- (•) Set up SQL Database instances on Azure

✓ Nice work

Correct! Setting up the SQL environment prior to migration is crucial to ensure the migrated data has a destination.

16. Which option allows custom routing in Azure to control traffic between subnets or to the internet? 1 / 1 point

- ( ) System-defined routes
- ( ) Peered routes
- (•) User-defined routes
- ( ) ExpressRoute

✓ Nice work

Correct! User-defined routes allow administrators to specify custom routing paths, overriding system routes when necessary.

17. What is the function of Azure Virtual WAN in terms of network management? 1 / 1 point

- ( ) Facilitates Azure resource tagging
- ( ) Manages virtual machine scaling
- (•) Enables global networking through centralized connection management
- ( ) Provides application-level security

✓ Nice work

Correct! Azure Virtual WAN enables connectivity across regions, managing site-to-site, and branch connections centrally.

18. What primary function does Azure Bastion serve in terms of VM management? 1 / 1 point

- (•) Offers secure remote access to VMs without public IPs
- ( ) Automates VM configuration
- ( ) Enables quick VM deployment with templates
- ( ) Balances network load across VMs

✓ Nice work

Correct! Azure Bastion provides secure RDP and SSH access to VMs without public IP exposure.

19. When choosing a connectivity option with no exposure to the public internet for cloud services, which service is the most suitable? 1 / 1 point

- (•) Azure ExpressRoute
- ( ) Azure Traffic Manager
- ( ) Azure VPN Gateway
- ( ) Azure Internet Gateway

✓ Nice work

Correct! ExpressRoute provides private connectivity directly to Azure, avoiding the public internet.

20. What capability does Azure Firewall Manager offer that enhances enterprise-level security management? 1 / 1 point

- ( ) Provides instant DDoS protection to applications
- ( ) Automates VM deployment scripts
- ( ) Deploys custom DNS solutions across Azure
- (•) Manages distributed firewall policies

✓ Nice work

Correct! Azure Firewall Manager centralizes and manages firewall policies across multiple locations.
