1. Why is it essential to implement failover strategies in multi-region deployments?

1 / 1 point

- ☐ To minimize cost by reducing the need for back-up
- ☐ To eliminate dependency on third-party services
- ☐ To ensure consistency and availability during region-specific failures
- ☐ To permanently increase network latency

☒ Nice work

Correct! Multi-region failover provides redundancy for reliability.

2. Why is GPU support significant in Azure Kubernetes Service?

1 / 1 point

- ☐ It provides additional storage
- ☐ It decreases network latency
- ☒ It enables faster graphical and ML computations
- ☐ It reduces costs of deployment

☒ Nice work

Correct! GPU-accelerated nodes boost performance for heavy computational tasks.

3. How does Azure API Management enhance the control and exposure of APIs?

1 / 1 point

- ☐ By providing unlimited API calls within Azure.
- ☐ By automatically generating API documentation.
- ☒ By acting as a gateway that buffers and controls access.
- ☐ By encrypting all API responses by default.

☒ Nice work

Correct! It uses gateways to manage how APIs are exposed and accessed.

4. Which Azure tool can be used to assess on-premises SQL Server instances for migration?

1 / 1 point

- ☐ Azure DevOps
- ☐ Azure Batch
- ☐ Azure API Management
- ☒ Azure Migrate

☒ Nice work

Correct! Azure Migrate assesses on-premises SQL instances for cloud migration suitability.

5. When should an organization consider implementing Azure DDoS Protection Standard over Basic?

1 / 1 point

- ☐ When saving on cost is a priority
- ☒ When facing frequent, sophisticated DDoS attacks
- ☐ When deploying multi-region applications
- ☐ When deploying small-scale applications

☒ Nice work

Correct! Standard provides advanced protection for enterprises expecting frequent and complex attacks.
