1. How does Generative Artificial Intelligence (AI) enhance the planning stage of the project management lifecycle? 1 / 1 point

- ☐ By generating project schedules, resource plans, and risk management strategies while analyzing data to identify dependencies and optimize resource use
- ☐ By approving budgets and business cases for project authorization
- ☐ By developing project charters and identifying initial stakeholders
- ☐ By closing contracts and documenting lessons learned

✔ **Correct**

In the planning phase, Generative Artificial Intelligence assists Project Managers by automating complex analysis, creating schedules, plans, and risk registers, and helping teams model scenarios to identify the most effective project plan.

2. Why is Generative Artificial Intelligence (AI) becoming an essential skill for today's managers and project professionals? 1 / 1 point

- ☐ Because it eliminates the need for planning and stakeholder engagement
- ☐ Because it completely replaces the need for human project managers
- ☒ Because it enhances decision making, speeds up documentation, and provides intelligent insights that help teams plan, adapt, and deliver value more efficiently
- ☐ Because it only benefits large organizations with advanced IT infrastructure

✔ **Correct**

Generative Artificial Intelligence acts as a strategic partner, helping managers and teams save time on routine tasks, improve clarity in communication, and make data-driven decisions that strengthen project outcomes.

3. How can Generative Artificial Intelligence (AI) support Business Analysts and Project Managers during the preparation phase of requirements elicitation? 1 / 1 point

- ☐ By validating final requirements with the sponsor after approval
- ☐ By creating design mockups for developers
- ☒ By generating stakeholder lists, suggesting elicitation techniques, and drafting meeting agendas or interview guides
- ☐ By scheduling executive meetings and setting budgets

✔ **Correct**

During preparation, Artificial Intelligence acts as a planning partner by helping identify stakeholders, select appropriate elicitation methods, and create structured materials that make sessions more effective.

4. What is a key advantage of using Generative Artificial Intelligence (AI) during or after the conducting phase of elicitation? 1 / 1 point

- ☒ It can summarize notes, identify recurring themes, and suggest follow-up questions to clarify vague responses
- ☐ It performs risk analysis for the entire project lifecycle
- ☐ It automatically finalizes and approves the documented requirements
- ☐ It replaces stakeholder interviews entirely

✔ **Correct**

Artificial Intelligence enhances elicitation by clustering stakeholder feedback, identifying pain points, and proposing additional questions to ensure clarity and completeness.

5. What is one of the major challenges Project Managers face when implementing Generative Artificial Intelligence (AI) solutions? 1 / 1 point

- ☐ Restricting team diversity to simplify project coordination
- ☐ Avoiding communication with stakeholders to prevent project delays
- ☐ Eliminating all human oversight to improve automation speed
- ☒ Ensuring data governance and security to prevent breaches and protect intellectual property

✔ **Correct**

Generative Artificial Intelligence systems rely on large datasets that might include sensitive or proprietary information. Project Managers must enforce data governance policies, safeguard intellectual property, and comply with privacy regulations.
