

Reading: Final Project Overview

Estimated time: 2 minutes

This final project provides an opportunity to apply the program and stakeholder management skills developed throughout the course, using generative AI (GenAI) tools to address a real-world business challenge.

The project centers on **Shop Ease Online**, a growing e-commerce company exploring AI-driven solutions to enhance customer support operations. In this scenario, you will analyze business needs, define clear responsibilities, and design engagement strategies that align with stakeholder interests and organizational goals.

By the end of this project, you will be able to:

- Apply GenAI tools such as ChatGPT, Gemini, Claude.ai, or Copilot to simulate project planning and communication tasks.
- Translate business requirements into actionable program management documents.
- Develop a RACI chart to clarify roles and responsibilities.
- Map stakeholder engagement strategies based on power and interest.

This project brings together your learning from across the program and demonstrates your readiness to use GenAI effectively in project environments.

Tasks Overview

Task 1: Review the Business Case

You will:

- Analyze the *Shop Ease Online AI Chatbot* business case using a GenAI tool.
- Identify key goals, challenges, assumptions, data gaps, and clarification questions.
- Summarize your findings in a structured table format.

Task 2: Gather Requirements

You will:

- Use a GenAI tool to generate at least eight functional and four non-functional requirements.
- Classify and prioritize them using the MoSCoW method.
- Provide brief rationales explaining the value of each requirement.

Task 3: Develop a RACI Chart

You will:

- Identify all key stakeholders from the business case.
- Define their roles and assign RACI designators (Responsible, Accountable, Consulted, Informed).
- Present your findings in a single structured table.

Task 4: Map Stakeholder Engagement Strategies

You will:

- Use the Power/Interest Model to define engagement strategies for each stakeholder.
- Specify the communication method, frequency, and approach for managing expectations.
- Capture your strategies in a concise table format.

Task 5: Reflection

You will:

- Write a short reflection (200–300 words) summarizing how GenAI supported your work.
- Discuss observed limitations and how AI-generated outputs could be validated or improved.
- Submit your reflection as part of your final deliverables.
