Question 1

Score: 4/4

Task 1: Use generative AI for discovery and requirements

Description: Use generative AI to simulate stakeholder discovery and produce structured requirements.

Required submissions: Interview plan, simulated transcript, functional and non-functional requirements, MoSCoW priorities, user stories, acceptance criteria

Criteria for success:

- Interview plan includes 10 role-based questions that reflect Product, Compliance, and Operations perspectives
- Transcript includes 8–12 Q&A responses demonstrating realistic stakeholder needs and assumptions
- Requirements reflect system capabilities and constraints based on the project scenario
- MoSCoW priorities are assigned logically based on MVP needs
- User stories follow "As a / I want / So that" format
- Acceptance criteria are written in Given/When/Then form and are measurable

Question 2

Score: 4/4

Task 2: Create a process model and architecture

Description: Model the digital loan onboarding process and system architecture using AI-generated diagrams (or written equivalent).

Required submissions: To-be BPMN process model, customer journey map, component and data flow diagram (or written equivalent)

Criteria for success:

- BPMN diagram (or written equivalent) includes application start, KYC step, credit decision gateway, manual review, and system notification
- Workflow includes both automated and manual steps
- Customer journey map (or written equivalent) shows the five stages: Discover, Apply, Pre-approve, Verify, Fund
- Journey map (or written equivalent) captures customer actions and touchpoints at each stage
- System component and data flow diagram (or written equivalent) identifies channels, API gateway, KYC service, credit bureau service, core banking, and audit logging
- Data flow and interactions are logical and consistent with system behavior
