

The 2026 Energy Crisis is a Recycling Problem

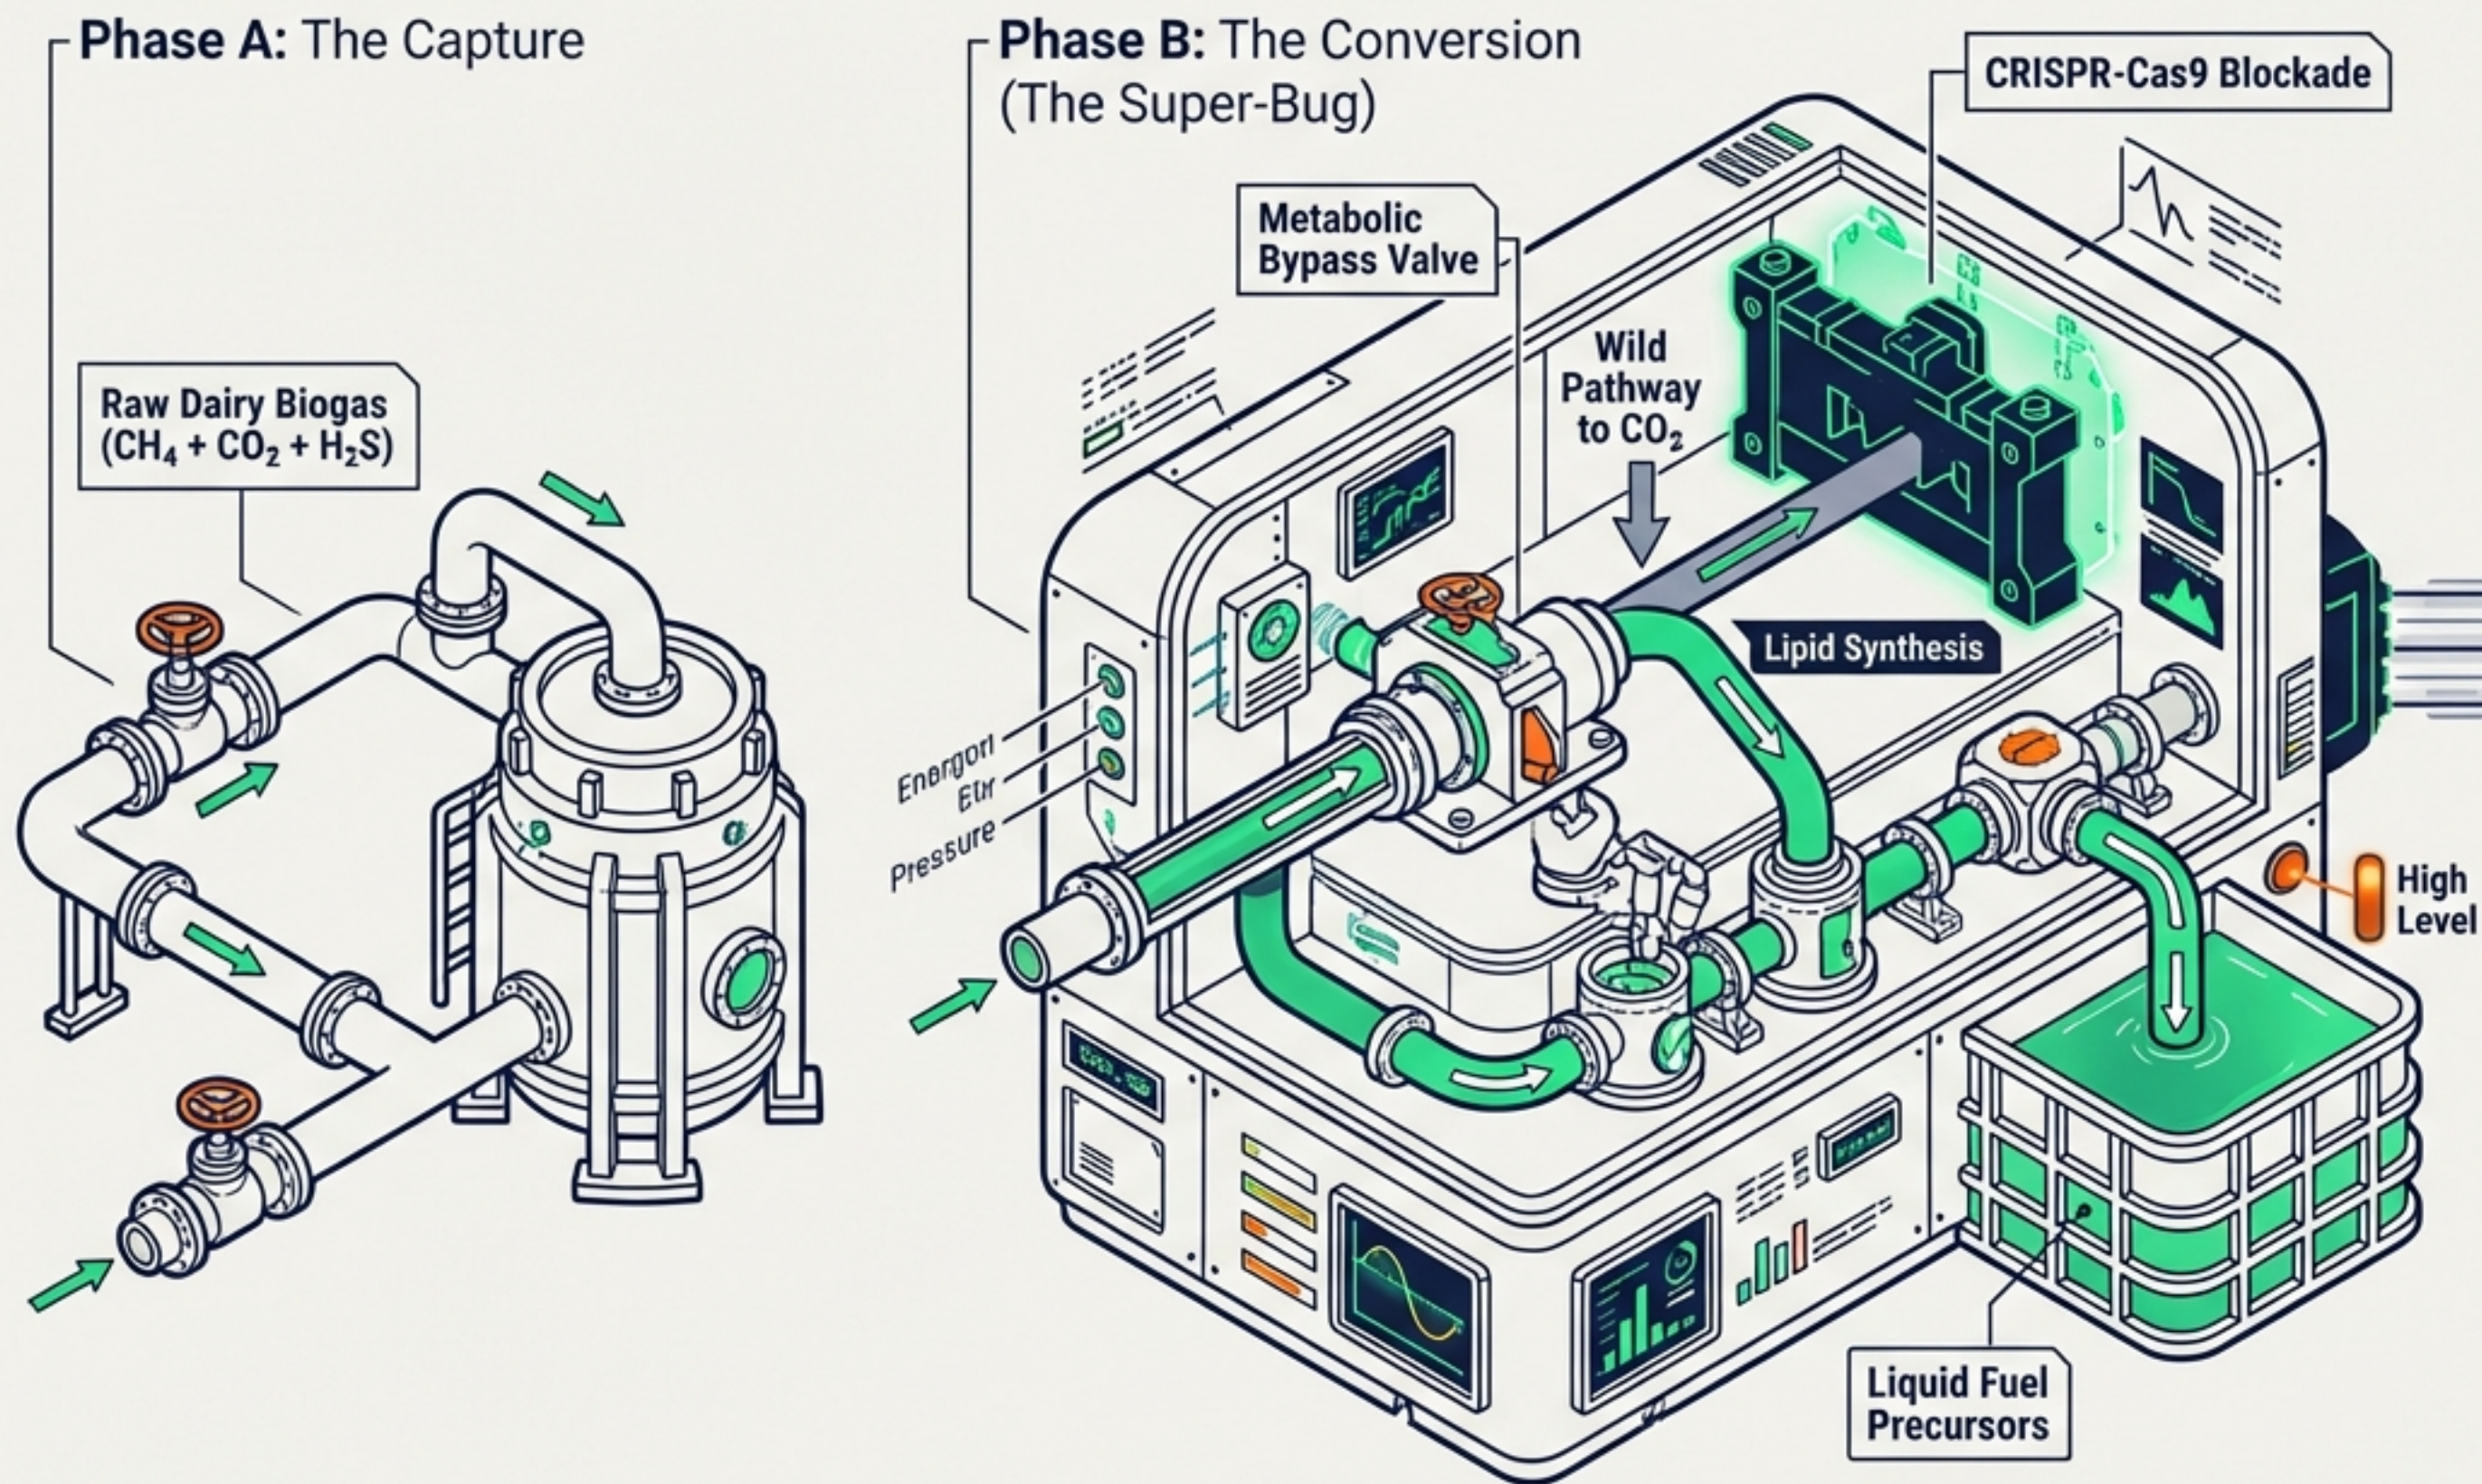

NeoCycle Bio decodes the global methane liability, utilizing synthetic biology to convert raw emissions into high-density energy assets.

OLD CARBON: Extractive		
		
Metric 01: High Geopolitical Volatility	Metric 02: Escalating Carbon Tax Liabilities	Metric 03: Fluctuating Baseline Fuel Costs

RECYCLED CARBON: Regenerative		
		
Metric 01: Localized Energy Sovereignty	Metric 02: Dual-Stream Carbon Credit Generation	Metric 03: Decoupled from Earth Extraction

Methane is no longer a waste byproduct; it is a stranded asset.

The Two-Stage Relay and Microbial Bypass

60%

Optimized Yield

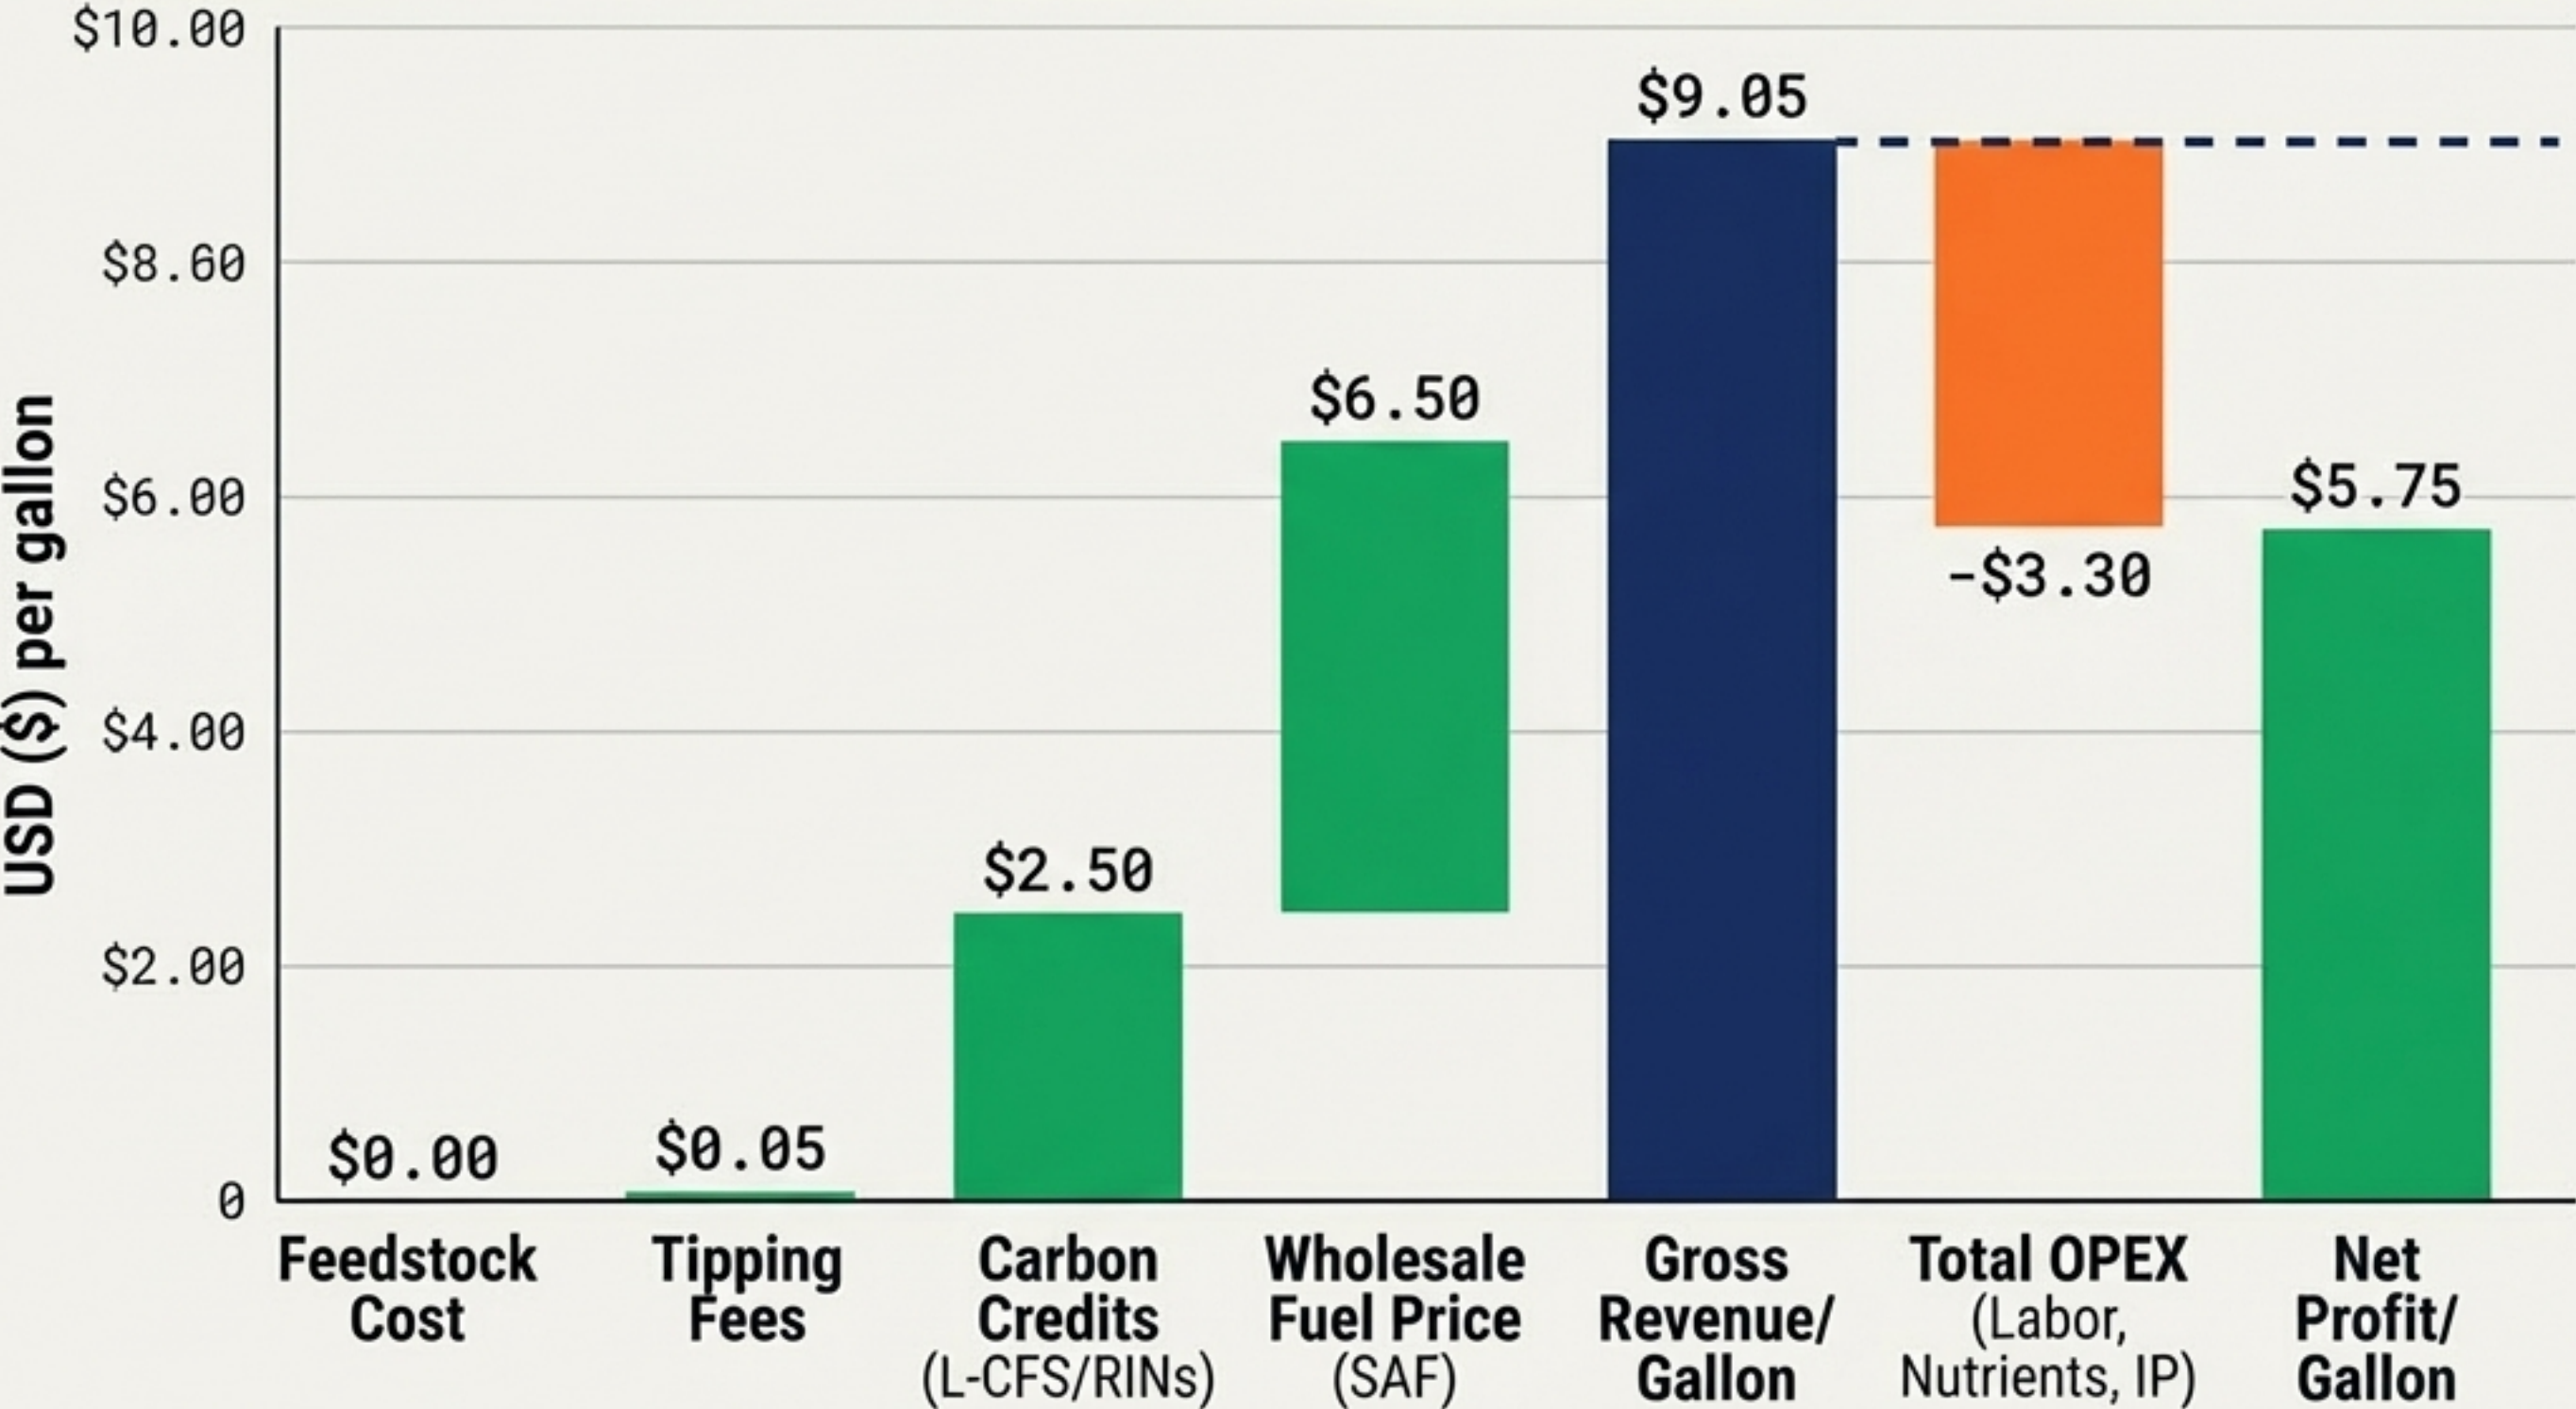

Winning the Energy Density Race Without Infrastructure Friction

Dimensions	Ethane (Fossil)	Ethanol (1st-Gen)	NeoCycle SAF (Synthesized)
Infrastructure Compatibility	 Highly volatile, specialized transport	 Corrosive, limited blend walls	 Molecular drop-in parity (Pipelines & Jet Engines)
Feedstock Source	 Extractive drilling	 Arable land (Displaces food)	 Negative-cost agricultural & municipal waste
Scalability & Energy Density	 High density, bottlenecked transport	 Low density (Unsuitable for aviation)	 High density (C8-C16 Hydrocarbons)

NeoCycle provides immediate decarbonization for long-haul logistics and aviation without multi-trillion-dollar fleet replacement.

Negative-Cost Feedstock Drives Software-Like Margins

Global 2026 Mandates Funnel Captive Feedstock Demand

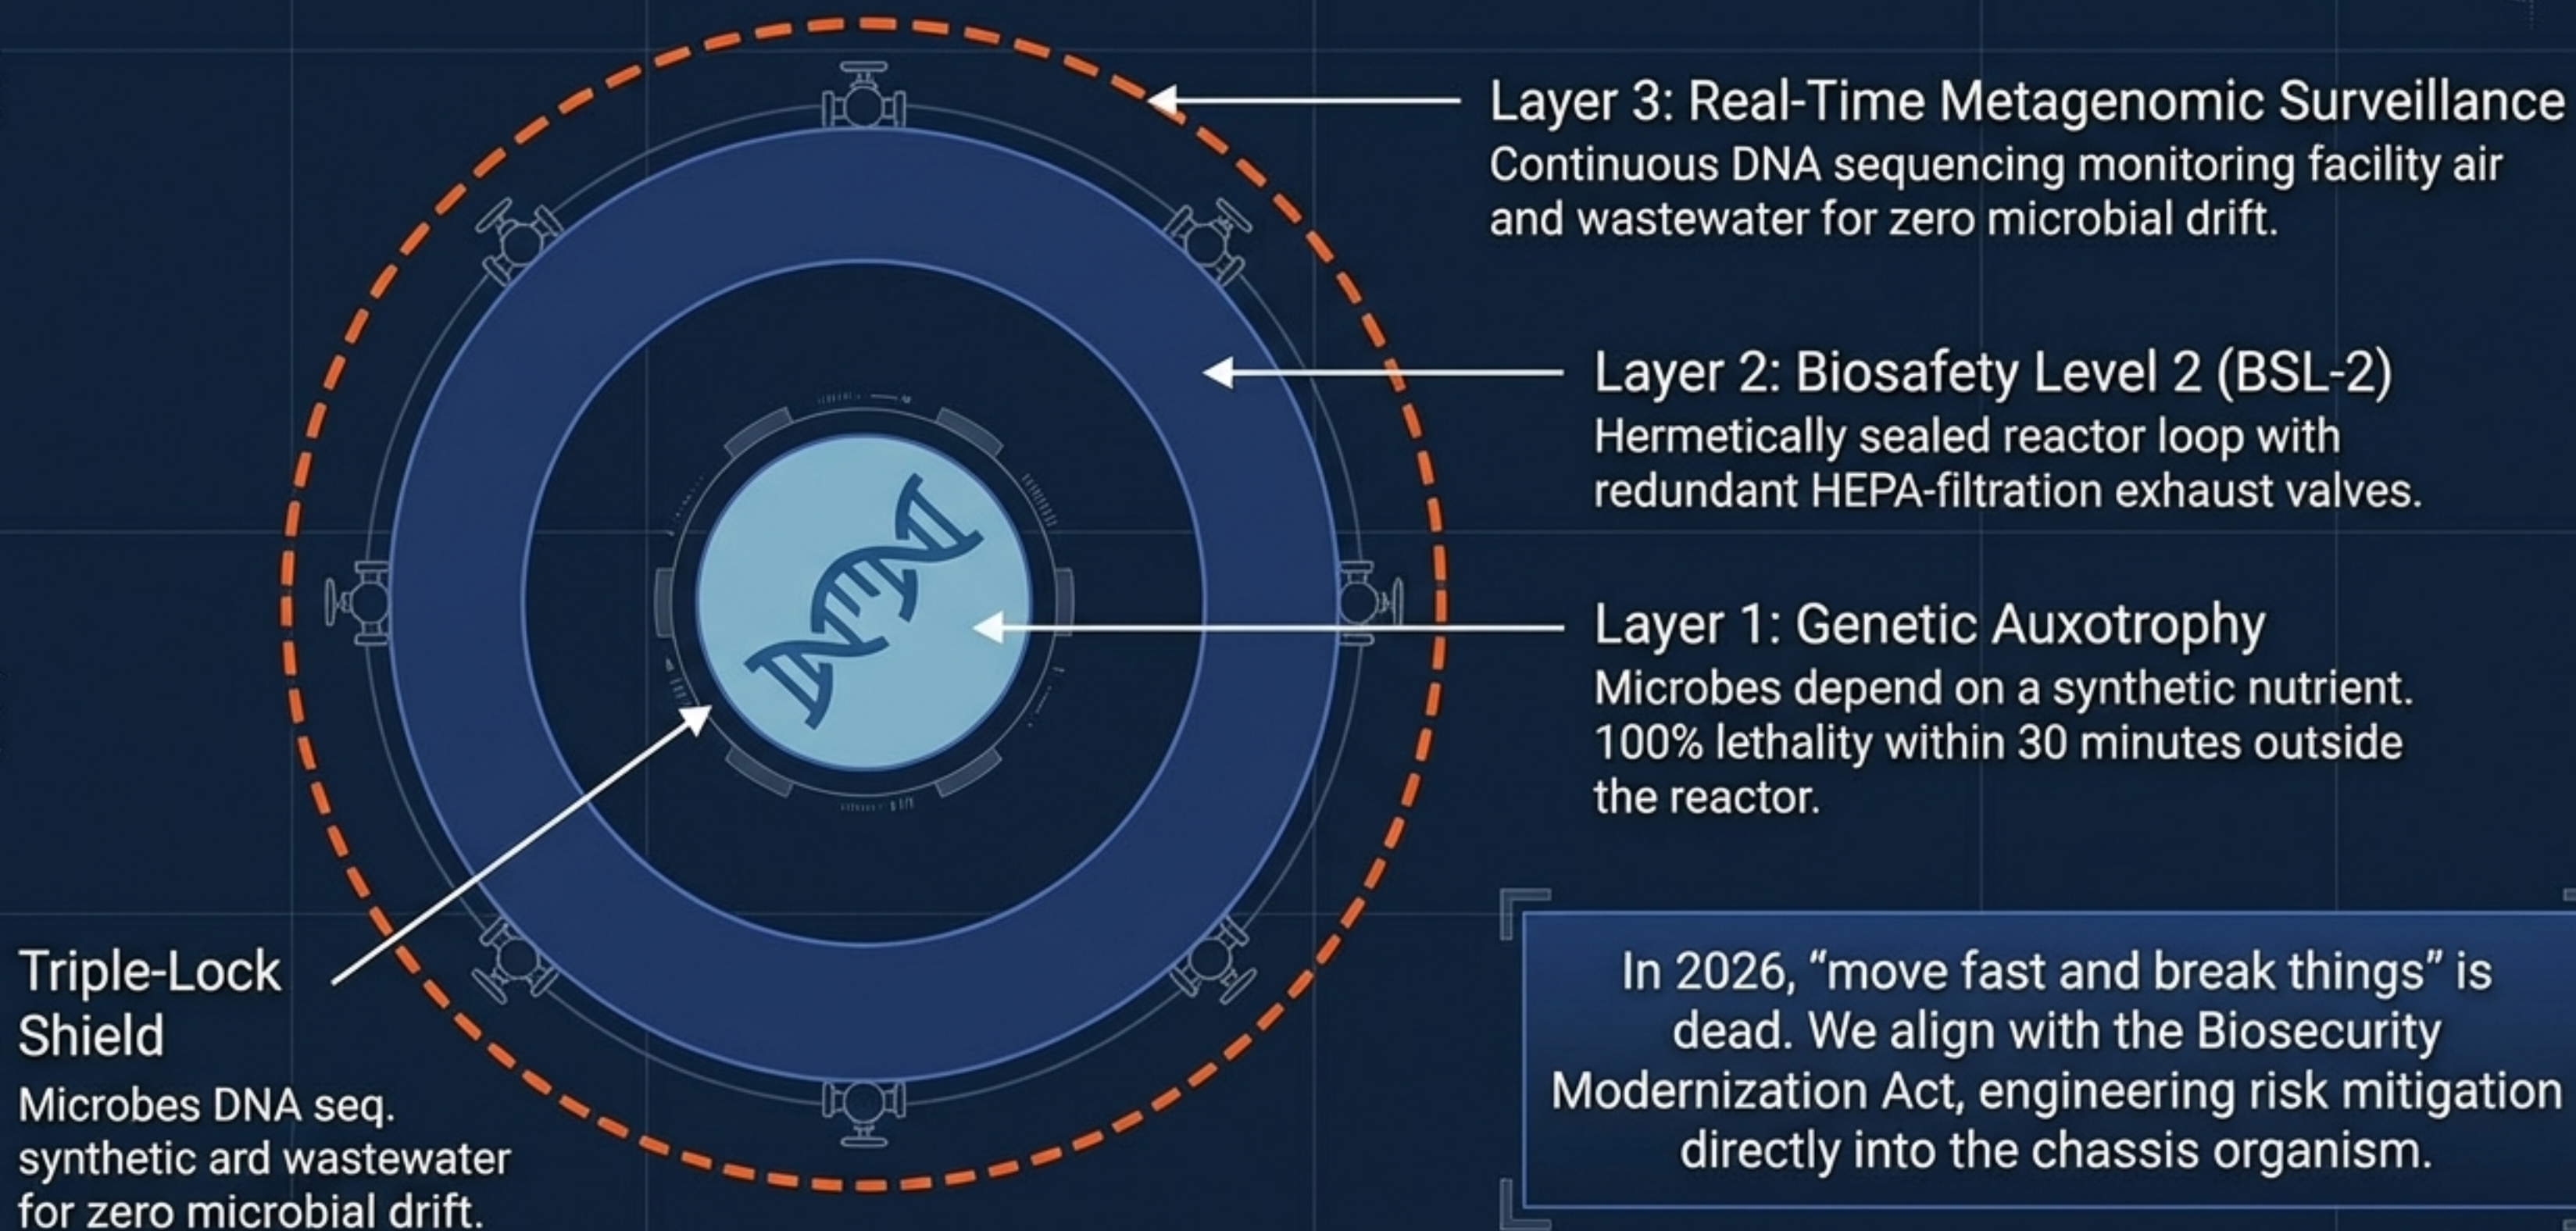

Decentralized Scale via the Hub-and-Spoke Architecture

By decentralizing capture and centralizing microbial refinement, NeoCycle eliminates the multi-billion-dollar pipeline CAPEX required by traditional hydrogen and natural gas infrastructure.

Biosecurity as an Insurmountable Competitive Asset

Partnering with a major regional airline, this commercial flight proves molecular parity and guarantees off-take demand ahead of our 2027 scaling phase.

The Uncontested Quadrant of Drop-In Decarbonization

While electrification captures the passenger market, long-haul logistics and aviation require molecular energy density. NeoCycle is the only scalable, negative-carbon drop-in solution.

\$25M Series A to Dominate the 2027 Compliance Wave

Funding Allocation

Series A Objective

Securing the first-mover advantage in the measurement-based carbon economy.

Funding bridges the path from pilot hub to continuous-flow industrial biomanufacturing.
