Activity details

This activity is optional, but highly recommended to help you practice using AI tools. At the end, you'll answer self-assessment questions to reflect on your learning. If you're unable to complete this activity, you'll still be able to progress through the course and earn a certificate from Google.

AI tool access

To complete this activity, you can use any browser-based generative AI tool of your choice. Generative AI technology is dynamic and ever-changing, so always double check what features and capabilities are available in the tools you're using. To use Gemini for this activity, go to gemini.google.com.

Scenarios

Option 1: Write a prompt to delegate work

Think of a piece of work you want to delegate to a new team member at work. It could be something like drafting a document or doing background research. For example, you might need to create a template for earnings reports that your team submits. AI tools can help with that.

Option 2: Write a prompt to generate a marketing email for a new business

You are a florist who's opening a new business that specializes in bespoke arrangements at large events. You think other businesses in the area might be interested in your services, and you want to market your business to them via email. You think Gemini could help.

Let's get started.

Step 1: Write a prompt

For option 1

If you were to delegate the piece of work to a teammate, what would you tell them to set them up for success? You'd probably describe the task in detail, give lots of background information, and provide an example or two. Clear and specific guidance would help your teammate meet your expectations and do great work.

You can work with [Gemini](https://gemini.google.com) the same way - by giving it clear and specific instructions, or prompts. To get the best results from your prompts, follow the TCREI framework: describe your **task**, specify the **context**, and give plenty of **references**.

Using this framework, draft a prompt, then enter it into Gemini.

For option 2

Work through the first 3 steps of the TCREI framework to make sure your prompt is effective.

Tell Gemini the **task** you want it to complete. Use clear and direct language. You might even include a persona and specify a format. In this case, the task might be to write an introductory email about the new floral design business to other local businesses, with the goal of exploring potential partnerships. The persona could be an email marketer who specializes in new business development, and the format could be 500 words with a friendly tone, bullet points, and an engaging subject line.

Give Gemini any **context** it needs to help you with the task. The context could include your goals, the reason for the task, or even what you've tried before that didn't work. In general, the more context you provide, the better the output. In this case, the context could include information about how you source flowers locally, specialize in bespoke arrangements, and offer custom pricing for loyal customers.

Provide **references**, examples you give to Gemini to learn from or emulate while generating output. You can paste a reference directly into your prompt, enter a link from the web, or attach a file.

Enter your prompt into Gemini.

Step 2: Evaluate your prompt

Once you've entered your prompt and received output, you need to evaluate the output. Ask yourself if Gemini's output is accurate, unbiased, and useful. This is part of being a responsible AI user.

Pro tip: Save your most successful prompt in your prompt library to update and reuse for similar tasks.

Step 3: Keep iterating

If you've evaluated the content and you still don't have the output you want, keep iterating. Modify the task, context, or references, or try out an entirely different prompt.

1. Was the prompting framework helpful? Describe how. Write 1-3 sentences.

1 / 1 point

Yes, the TCREI framework was extremely helpful because it provided a clear structure for building a complete prompt. By explicitly defining the task, persona, and context upfront, the AI was able to generate a much more relevant and tailored draft on the first try. It saved me time from having to make heavy edits or re-prompt multiple times.
