

AI Fundamentals

Module 1

Collaborate with AI

Module 2

Practice using AI

Module 3

Learn how AI works

Module 4

Design great prompts

Module 5

Level up your prompts

● Prompt chaining strategies

Reading - 5 min

● Practice prompt chaining in Gemini

Lab - 10 min

● Help, what's a hack for giving Gemini context in a new chat?

Video - 2 min

● Generate visuals with AI

Reading - 4 min

● Create custom images with Gemini

Lab - 10 min

Module 6

Use AI responsibly

Generate visuals with AI

0:24 / 2:45

You can accomplish a lot with text-only prompts and outputs, but incorporating other formats like images, audio, and video can unlock a new world of possibilities.

With Gemini, you can create a video from a single sentence, draft an email based on pictures of your products, and build entire presentations based on audio recordings. This capability is referred to as **multimodality**.

What is multimodality?

To break it down, modalities are different types of formats, like text, image, or audio.

Multimodality is useful because it allows you to give Gemini more detailed and richer context when prompting it. Instead of failing if what you want using only words, you can enrich your instructions with images, video, and audio.

Practice using Gemini's multimodal capabilities

In the upcoming lab, we'll demonstrate multimodality in action by creating images from text prompts, as well as showing how you can incorporate images into your prompts themselves.

To do this, you will use *Bard* Pro, an image-generation and editing model available in the Gemini app. You can prompt it with text or images to create and edit high-quality visuals.

What you'll gain:

- **Visual storytelling:** Learn to create custom imagery that matches your specific vision without needing complex graphic design software.
- **Multimodal fluency:** Learn the nuances of prompting AI to create images (such as specifying style, lighting, and composition) as well as how to use images themselves to guide AI.
- **Streamlined workflow:** Get experience generating, refining, and combining different creative elements, such as copy and visuals, within a single chat interface.

Apply what you learn:

- Experiment with examples relevant to your role.
- If you work in **marketing**, try generating a social media image for a new product launch
 - If you work in **sales**, try generating visuals to make a slide deck more engaging
 - If you're an **educator**, try creating visual aids for a lesson plan

The goal isn't just to make one image for a presentation or a poster. Instead, it's to unlock the ability to turn your abstract ideas into concrete visual assets instantly.

Ready to bring your ideas to life? Let's dive in.

Google AI Pro required. This lab requires higher access to Google's most capable models. As a learner enrolled in this certificate, you are eligible for a complimentary 3-month trial subscription to help you build your portfolio of AI solutions. Please ensure you have [activated your trial](#) before beginning this lab.

This lab is optional, but highly recommended to help you practice using AI for work. You do not need to complete this lab to progress through the course or earn your certificate from Google.
